コンソールに接続している管理者には、リモートユーザーがログインしたときにデバッグメッセージが表示されません。リモートログインに対してデバッグメッセージが表示されるようにするには、どのアクションを使用しますか？**A.** logging console debug configuration コマンドを入力します。**B.** transport input ssh configuration コマンドを入力します。**C.** terminal monitor exec コマンドを入力します。**D.** aaa new-model 設定コマンドを入力します。**Answer: A** Explanation: Explanation The logging console is a default and hidden command.

NEW QUESTION: 2 Your mobile application includes a photo-sharing service that is expecting tens of thousands of users at launch. You will leverage Amazon Simple Storage Service (S3) for storage of the user images, and you must decide how to authenticate and authorize your users for access to these images. You also need to manage the storage of these images. Which two of the following approaches should you use? Choose two answers from the options below.**A.** Authenticate your users at the application level, and use AWS Security Token Service (STS) to grant token-based authorization to S3 objects.**B.** Create an Amazon S3 bucket per user, and use your application to generate the S3 URI for the appropriate content.**C.** Use AWS Identity and Access Management (IAM) user accounts as your application-level user database, and offload the burden of authentication from your application code.**D.** Use a key-based naming scheme comprised from the user IDs for all user objects in a single Amazon S3 bucket.**E.** Authenticate your users at the application level, and send an SMS token message to the user. Create an Amazon S3 bucket with the same name as the SMS message token, and move the user's objects to that bucket.**Answer: A, D** Explanation: Explanation The AWS Security Token Service (STS) is a web service that enables you to request temporary, limited-privilege credentials for AWS Identity and Access Management (IAM) users or for users that you authenticate (federated users). The token can then be used to grant access to the objects in S3. You can then provide access to the objects based on the key values generated via the user ID. Option A is possible but then becomes a maintenance overhead because of the number of buckets. Option B is invalid because IAM users is not a good security practice. Option D is invalid because SMS tokens are not efficient for this requirement. For more information on the Security Token Service please refer to the below link: * <http://docs.aws.amazon.com/STS/latest/APIReference/Welcome.html>
