NEW QUESTION: 1The figure shows the file pool policy configured for an OceanStor 9000 storage system. The monitoring and migration time is 2:00-4:00 a.m. every day. At 9:00 a.m. on Monday, file A was created in the example\test directory. By 10:00 a.m., file A had been read and written for 15 times and the file size became 150 MB. After that, file A was no longer accessed. At 9:00 a.m. on Tuesday, in which tier is file A stored?**A.** Small-data tier**B.** High-performance tier**C.** High-bandwidth tier**Answer: C**

NEW QUESTION: 2You want to allow all of your company's users to access the Internet without allowing other Web servers to collect the IP addresses of individual users. What two solutions can you use? (Choose two).**A.** Configure a proxy server to hide users' local IP addresses.**B.** Configure a firewall to use Port Address Translation.**C.** Assign the same IP address to all users.**D.** Install a Web content filter to hide users' local IP addresses.**E.** Assign unique IP addresses to all users.**Answer: A,B****Explanation:**In computer networks, a proxy server is a server (a computer system or an application) that acts as an intermediary for requests from clients seeking resources from other servers.[1] A client connects to the proxy server, requesting some service, such as a file, connection, web page, or other resource available from a different server and the proxy server evaluates the request as a way to simplify and control its complexity.Proxies were invented to add structure and encapsulation to distributed systems.[2] Today, most proxies are web proxies, facilitating access to content on the World Wide Web and providing anonymity. Source: https://en.wikipedia.org/wiki/Proxy_serverPort Address Translation (PAT) is a subset of NAT, and it is still swapping out the source IP address as traffic goes through the NAT/PAT device, except with PAT everyone does not get their own unique translated address. Instead, the PAT device keeps track of individual sessions based on port numbers and other unique identifiers, and then forwards all packets using a single source IP address, which is shared. This is often referred to as NAT with overload; we are hiding multiple IP addresses on a single global address.Source: Cisco Official Certification Guide, Port Address Translation, p.368

NEW QUESTION: 3 Which of the following cloud deployment model can be shared by several organizations?
A. Hybrid Cloud
B. Public Cloud
C. Private Cloud
D. Community Cloud
Answer: D
Explanation: In Community cloud, the cloud infrastructure is provisioned for exclusive use by a specific community of consumers from organizations that have shared concerns (e.g., mission, security requirements, policy, and compliance considerations). It may be owned, managed, and operated by one or more of the organizations in the community, a third party, or some combination of them, and it may exist on or off premises. For your exam you should know below information about Cloud Computing deployment models:
Private cloud
The cloud infrastructure is provisioned for exclusive use by a single organization comprising multiple consumers (e.g., business units). It may be owned, managed, and operated by the organization, a third party, or some combination of them, and it may exist on or off premises.

Community Cloud
The cloud infrastructure is provisioned for exclusive use by a specific community of consumers from organizations that have shared concerns (e.g., mission, security requirements, policy, and compliance considerations). It may be owned, managed, and operated by one or more of the organizations in the community, a third party, or some combination of them, and it may exist on or off premises.
Image Reference - <http://cloudcomputingksu.files.wordpress.com/2012/05/community-cloud.png>
Public Cloud
The cloud infrastructure is provisioned for open use by the general public. It may be owned, managed, and operated by a business, academic, or government organization, or some combination of them. It exists on the premises of the cloud provider.
Image reference - <http://definethecloud.files.wordpress.com/2010/04/image3.png>
Hybrid cloud
The cloud infrastructure is a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability (e.g., cloud bursting for load balancing between clouds)
Image reference - <http://www.virtualizationpractice.com/wp-content/uploads/2013/04/Hybrid-Cloud-Computing-Solution1.jpg>
The following answers are incorrect:
Private cloud - The cloud infrastructure is provisioned for exclusive use by a single organization comprising multiple consumers (e.g., business units). It may be owned, managed, and operated by the organization, a third party, or some combination of them, and it may exist on or off premises.
Public cloud - The cloud infrastructure is provisioned for open use by the general public. It may be owned, managed, and operated by a business, academic, or government organization, or some combination of them. It exists on the premises of the cloud provider.
Hybrid cloud - The cloud infrastructure is a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability (e.g., cloud bursting for load balancing between clouds)
