NEW QUESTION: 3 Refer to the exhibit. SwitchA receives the frame with the addressing shown. According to the command output also shown in the exhibit, how will SwitchA handle this frame?
A. It will forward the frame out port Fa0/6 only.
B. It will flood the frame out all ports except Fa0/3.
C. It will flood the frame out all ports.
D. It will drop the frame.
Answer: B

Explanation: Switches learn the MAC addresses of PCs or workstations that are connected to their switch ports by examining the source address of frames that are received on that port. Machines may have been removed from a port, turned off, or moved to another port on the same switch or a different switch. This could cause confusion in frame forwarding. The MAC address entry is automatically discarded or aged out after 300 seconds. If there is not MAC address of destination host in MAC table, switch sends broadcast to all ports except the source to find out the destination host.
