MAC SpoofingC. ImpersonationD. Session Hijacking****Answer: A****Explanation:**

**Explanation/Reference:**Explanation:This question states that antivirus is up-to-date on the workstation and the firewall has not been altered.The antivirus software is up to date with all 'known' viruses. A zero-day vulnerability is an unknown vulnerability so a patch or virus definition has not been released yet.A zero-day vulnerability refers to a hole in software that is unknown to the vendor. This security hole is then exploited by hackers before the vendor becomes aware and hurries to fix it-this exploit is called a zero-day attack. Uses of zero day attacks can include infiltrating malware, spyware or allowing unwanted access to user information. The term "zero day" refers to the unknown nature of the hole to those outside of the hackers, specifically, the developers. Once the vulnerability becomes known, a race begins for the developer, who must protect users.
