Explanation: Scenario: Ensure that the number of compute nodes of the front-end and the middle tiers of the payment processing system can increase or decrease automatically based on CPU utilization. Ensure that each tier of the payment processing system is subject to a Service Level Agreement (SLA) of 99.99 percent availability. Load Balancer supports inbound and outbound scenarios, provides low latency and high throughput, and scales up to millions of flows for all TCP and UDP applications. Azure Load Balancer is available in two SKUs: Basic and Standard. There are differences in scale, features, and pricing. Standard SLA guarantees a 99.99% for data path with two healthy virtual machines. Basic SLA does not exist. Reference: <https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-overview>

NEW QUESTION: 2 You have an on-premises network that contains 100 servers. You need to recommend a solution that provides additional resources to your users. The solution must minimize capital and operational expenditure costs. What should you include in the recommendation?**A.** an additional data center**B.** a complete migration to the public cloud**C.** a private cloud**D.** a hybrid cloud**Answer: D**
Explanation: A hybrid cloud is a combination of a private cloud and a public cloud. Capital expenditure is the spending of money up-front for infrastructure such as new servers. With a hybrid cloud, you can continue to use the on-premises servers while adding new servers in the public cloud (Azure for example).
