Salesには、払い戻しタイプのレコードと売り上げタイプのレコードの詳細が含まれています。

データウェアハウス設計には、売上データ用のテーブルと返金データ用のテーブルがあります。

Explanation: Explanation The Conditional Split transformation can route data rows to different outputs depending on the content of the data. The implementation of the Conditional Split transformation is similar to a CASE decision structure in a programming language. The transformation evaluates expressions, and based on the results, directs the data row to the specified output. This transformation also provides a default output, so that if a row matches no expression it is directed to the default output.
