**NEW QUESTION: 1**Which of the following are used as primary technologies to create a layered defense for giving protection to a network?Each correct answer represents a complete solution. Choose all that apply.**A.** Vulnerability**B.** Endpoint authentication**C.** Firewall**D.** IDS  
**Answer: B,C,D**

**NEW QUESTION: 2**DRAG DROPYou are evaluating the planned deployment of the additional Exchange Server 2013 servers.You need to meet the technical requirement for installing all of the anti-spam agents and for enabling antimalware filtering.What should you do? (To answer, drag the appropriate servers to the correct locations. Each server may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)  
**Answer:** Explanation:

**NEW QUESTION: 3**A new high-priority project is assigned to the project manager with a fully formed budget, deadline, and scope. The project manager is creating the project schedule. Which of the following calculations accurately shows the critical path?**A.** 39 days**B.** 49 days**C.** 52 days**D.** 20 days**Answer: C**

**NEW QUESTION: 4**Which data center characteristic refers to the capability to grow resources without impacting business operations?**A.** Availability**B.** Scalability**C.** Security**D.** Performance  
**Answer: B**Explanation:Key Characteristics of a Data CenterAvailability: A data center should ensure the availability of information when required.Unavailability of information could cost millions of dollars per hour to businesses, such as financial services, telecommunications, and e-commerce.Security: Data centers must establish policies, procedures, and core element integration to prevent unauthorized access to information.Scalability: Business growth often requires deploying more servers, new applications, and additional databases. Data center resources should scale based on requirements, without interrupting business operations.

Performance: All the elements of the data center should provide optimal performance based on the required service levels. Data integrity: Data integrity refers to mechanisms, such as error correction codes or parity bits, which ensure that data is stored and retrieved exactly as it was received. Capacity: Data center operations require adequate resources to store and process large amounts of data, efficiently. When capacity requirements increase, the data center must provide additional capacity without interrupting availability or with minimal disruption. Capacity may be managed by reallocating the existing resources or by adding new resources. Manageability: A data center should provide easy and integrated management of all its elements. Manageability can be achieved through automation and reduction of human (manual) intervention in common tasks. EMC E10-001 Student Resource Guide. Module 1: Introduction to Information Storage
