public static void LogException(Exception ex) You have the following requirements: log all exceptions by using the LogException() method of the ExceptionLogger class. rethrow the original exception, including the entire exception stack. The stack trace is a list of the method call hierarchy that starts with the method that throws the exception and ends with the method that catches the exception. If an exception is re-thrown by specifying the exception in the throw statement, the stack trace is restarted at the current method and the list of method calls between the original method that threw the exception and the current method is lost. To keep the original stack trace information with the exception, use the throw statement without specifying the exception.
