The Best CompTIA DS0-001 Cert Exam, And what DS0-001 study guide can bring you more than we have mentioned above.

**NEW QUESTION: 1** A video streaming company uses SLB to distribute user requests to 30 ECS instances (the 30 ECS instances have the same configuration). Yet, the company finds that the service traffic soars dramatically every night from 20:00 to 02:00. According to their calculation, the evening traffic is 100% higher than the traffic in other periods of time. To properly respond to user requests, which of the following methods is most preferred from the perspective of cost and implementation simplicity?**A.** Create 30 ECS instances based on the custom image and add them to SLB. Then, configure weights for these ECS instances to respond to user requests every night from 20:00 to 02:00, and reset those weights to zero for other periods of time.**B.** Configure Auto Scaling appropriately to automatically upgrade/downgrade the ECS instances.**C.** Manually create 30 ECS instances using the custom image, and then add them to SLB every night before 20:00 and remove them after 02:00.**D.** Configure Auto Scaling appropriately to automatically add or reduce ECS instances.**Answer: D****Explanation:**Reference: <https://www.alibabacloud.com/product/auto-scaling>

**NEW QUESTION: 2** **A.** Option **D** **B.** Option **B** **C.** Option **A** **D.** Option **C****Answer: B**

**NEW QUESTION: 3** What functionality is provided to Unity from its integration with CTA?**A.** Unity configured as a destination for tiered OHSM data**B.** Data migration solution for VNX block storage to Unity**C.** Synchronous disaster recovery solution for Unity Me storage**D.** DHSM data mobility to cloud destination on Virtustream**Answer: C**

**NEW QUESTION: 4** **HOTSPOT****Answer:** Explanation:Topic 2, Contoso LtdOverviewGeneral OverviewContoso, Ltd., is a scientific research and supply company that has offices along the east coast of North America. The company recently completed an upgrade to Exchange Server 2013.Physical LocationsThe company has three sales offices and a research office. The sales offices are located inAtlanta, New York, and Montreal. The research office is located in Miami. Existing EnvironmentActive Directory EnvironmentThe network contains one Active Directory forest named contoso.com. The Miami office has its own domain named research.contoso.com. Each office is configured as an Active Directory site. Each site contains two domain controllers that run Windows Server 2008 R2 x64. All of the FSMO roles for contoso.com are owned by a domain controller in the New York site. All of the FSMO roles for the research.contoso.com domain are owned by a domain controller in the Miami site.One domain controller in each site is configured as a global catalog server. All of the domain controllers are configured as DNS servers.The functional level of the forest and domains is Windows Server 2008 R2.Network InfrastructureAll client computers are configured to connect to the DNS servers in their respective office only.Contoso.com has a standalone certification authority (CA) on a server that runs WindowsServer 2008 R2.All offices connect to the New York office by using a high-speed WAN link.Email InfrastructureThe Exchange Server 2013 organization contains four servers in the New York office. The servers are configured as shown in the following table.All external access for the contoso.com organization is provided through an Internet link at the New York office. Load balancing is provided by using DNS round robin. All inbound and

outbound email for the domain is routed through a mail appliance in the New York office. The Exchange Server 2013 organization contains four servers in the Atlanta office. The servers are configured as shown in the following table. The file share witness for NY-DAG is on a file server in the Atlanta office. The Exchange Server 2013 organization contains two servers in the Montreal office and two servers in the Miami office. The servers are configured as shown in the following table. All external access to the organization of the research.contoso.com domain is provided through the Internet link at the Miami office. Load balancing is provided by using DNS round robin. All inbound and outbound email for the domain goes through an email appliance in the Miami office. All Exchange Server 2013 servers run Windows Server 2012 Standard. All users have Windows Phone devices that connect to the Exchange organization by using Exchange ActiveSync. User Issues You discover the following user issues: \* Some users report that, intermittently, they fail to connect to their email from their Windows Phone device. \* Some users from the New York office report that some searches from Outlook Web App return incomplete results. \* Some of the users in each office report that they fail to access their mailbox during the maintenance period of the Active Directory domain controllers. You verify that all of the remote users can connect to the network successfully by using a VPN connection, and can then launch Outlook successfully. Partnerships Contoso recently entered into a partnership with a company named A. Datum Corporation (A). Datum has a main office and four branch offices. The main office is located in Toronto (A). Datum has a messaging infrastructure configured as shown in the following table. Requirements Planned Changes Contoso plans to deploy a hardware load balancer in the New York office. The load balancer must bridge all SSL connections to the Exchange servers. You plan to deploy two new Exchange Server 2013 servers in a virtual server environment in the Miami office. The servers will host a few mailboxes as part of an evaluation of resource utilization for virtualized Exchange servers. You also plan to deploy a high availability solution for Mailbox servers in the New York office. You plan to replace the email appliance in New York because of recent power outages. Business Requirements Contoso identifies the following business requirements: \* Minimize the hardware costs required for a load balancing solution. \* Minimize the software costs required for a load balancing solution. \* Minimize user interruptions if a service fails on a Mailbox server. \* Minimize user interruptions if a service fails on a Client Access server.
