**NEW QUESTION: 1A. IP MTUB. TCP MSSC. MTUDD. MTU ignoreE. UDP windows sizesF. DF bit clear**  
**Answer: B,F**

**NEW QUESTION: 2** Why has the Branch3 router lost connectivity with R1? Use only show commands to troubleshoot because usage of the debug command is restricted on the Branch3 and R1 routers.  
**A.** A PPP chap password mismatch is noticed between Branch3 and R1.  
**B.** A PPP chap hostname mismatch is noticed between Branch3 and R1.  
**C.** PPP encapsulation is not configured on Branch3.  
**D.** The PPP chap hostname and PPP chap password commands are missing on the Branch3 router.  
**Answer: B**  
**Explanation:** First we should check Branch3 (and R1) with the "show ip interface brief" command to find any Layer1/Layer 2 issue. We see the interfaces connecting between them are in "up/down" states which indicates an Layer 2 issue so we should check the configuration of these interfaces carefully with the "show running-config" command and pay attention to these interfaces. and on Branch3: We learn from above config is R1 is using CHAP to authenticate Branch3 router (via the "ppp authentication chap" command on R1). Branch3 router is sending CHAP hostname "Branch\_3" and CHAP password "Branch3\_Secret!" to R1 to be authenticated. Therefore we should check if R1 has already been configured with such username and password or not with the "show running-config" command on R1: R1\_show\_run\_username.jpg On R1 we see the configured username is "Branch3", not "Branch\_3" so the usernames here are mismatched and this is the problem -> Answer A is correct.
