**NEW QUESTION: 1** Which statement about the ASA redundant interface is true? **A.** It can only be used for failover links. **B.** By default, the first physical interface that is configured in the pair is the active interface. **C.** The redundant interface uses the MAC address of the second physical interface in the pair. **D.** It is a logical interface that combines two physical interfaces, both of which are active. **Answer: B**

**NEW QUESTION: 2** **A.** Option **A**. Option **B**. Option **C** **Answer: C** **Explanation:** Explanation Option A is incorrect because CloudFormation templates have the option to update resources. Option B is incorrect because only those resources that need to be changed as part of the stack update are actually updated. Option D is incorrect because deleting the stack is not the ideal option when you already have a change option available. When you need to make changes to a stack's settings or change its resources, you update the stack instead of deleting it and creating a new stack. For example, if you have a stack with an EC2 instance, you can update the stack to change the instance's AMI ID. When you update a stack, you submit changes, such as new input parameter values or an updated template. AWS CloudFormation compares the changes you submit with the current state of your stack and updates only the changed resources For more information on stack updates please refer to the below link:\*

Nachdem der RODC eine Anmeldeanforderung für einen authentifizierten Benutzer oder Computer erhalten hat, verweist er auf die Kennwortreplikationsrichtlinie, um zu bestimmen, ob das Kennwort für das Konto zwischengespeichert werden soll.Referenz: Kennwortreplikationsrichtlinie [https://technet.microsoft.com/en-us/library/cc730883\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/cc730883(v=ws.10).aspx)
