#### **NEW QUESTION: 2**

いつでもグローバルに利用できる必要があるミッションクリティカルなアプリケーションがあります。どの導入戦略を採用する必要がありますか? **A.**

1つのリージョンで複数のフォールトドメインを使用します。 **B.**

複数のリージョンの可用性ドメインで複数のフォールトドメインを使用します。 **C.**

各リージョンの各可用性ドメインで複数のフォールトドメインを使用します。 **D.**

1つのリージョンで複数の可用性ドメインを使用します。 **Answer: C** Explanation: Explanation Oracle Cloud Infrastructure is hosted in regions and availability domains. A region is a localized geographic area, and an availability domain is one or more data centers located within a region. A region is composed of one or more availability domains. Regions are independent of other regions and can be separated by vast distances-across countries or even continents. Availability domains are isolated from each other, fault tolerant, and very unlikely to fail simultaneously. Because availability domains do not share infrastructure such as power or cooling, or the internal availability domain network, a failure at one availability domain within a region is unlikely to impact the availability of the others within the same region. Fault domain is a grouping of hardware and infrastructure within an availability domain. Each availability domain contains three fault domains. Fault domains provide anti-affinity: they let you distribute your instances so that the instances are not on the same physical hardware within a single availability domain. A hardware failure or Compute hardware maintenance event that affects one fault domain does not affect instances in other fault domains. In addition, the

physical hardware in a fault domain has independent and redundant power supplies, which prevents a failure in the power supply hardware within one fault domain from affecting other fault domains.
