NEW QUESTION: 1 Which three options are attack vectors protected by Email Security? (Choose three)**A.** E-mail**B.** Mobile**C.** Offline Devices**D.** Endpoints**E.** Backups**F.** Voicemail**Answer: A,B,D**Explanation:Explanation/Reference:Explanation:ASAS Security Web and Email SE Module 2

NEW QUESTION: 2 What is a serious complication an organization faces from the compliance perspective with international operations?**A.** Different operational procedures**B.** Different capabilities**C.** Multiple jurisdictions**D.** Different certifications**Answer: C**Explanation: Explanation/Reference:Explanation:When operating within a global framework, a security professional runs into a multitude of jurisdictions and requirements, which often may not be clearly applicable or may be in contention with each other. These requirements can involve the location of the users and the type of data they enter into systems, the laws governing the organization that owns the application and any regulatory requirements they may have, and finally the appropriate laws and regulations for the jurisdiction housing the IT resources and where the data is actually stored, which may be multiple jurisdictions as well. Different certifications would not come into play as a challenge because the major IT and data center certifications are international and would apply to any cloud provider. Different capabilities and different operational procedures would be mitigated by the organization's selection of a cloud provider and would not be a challenge if an appropriate provider was chosen, regardless of location.

NEW QUESTION: 3 Which of the following is a server-based security system that helps in providing dynamic control over PDFs and is configured to run with LDAP, ADS, and other enterprise systems?**A.** Certificate security**B.** Password security**C.** Adobe LiveCycle Rights Management ES**D.** Application security**Answer: C**Explanation:Adobe LiveCycle Rights Management ES (ALCRMS) is a server-based security system that helps in providing dynamic control over PDFs. Adobe LiveCycle Rights Management ES is configured in order to run with LDAP, ADS, and other enterprise systems. Adobe LiveCycle Rights Management ES provides policies that are stored on the server and can be refreshed from the server. Users connect to ALCRMS to work with these policies. Adobe LiveCycle Rights Management ES allows users to manage accounts and configure security policies for their organization. It also allows users to apply a policy to documents without the need for digital signatures and certificates.Answer option C is incorrect. Password security is used to limit access to a PDF by setting passwords and by restricting certain features, such as printing and editing. However, users cannot restrict saving copies of a PDF. The copies also have the same restrictions as the original PDF. Following are the two types of passwords available:Document open password: In a document open password (also known as a user password), users should type in the password specified in order to open the PDF.Permissions password: In a permissions password (also known as a master password), recipients do not require a password to open the document. However, users should type the permissions password to set or modify the restricted features.If the PDF is secured with both types of passwords, a PDF can be opened with either of the passwords. However, only the permissions password permits users to change the restricted features. Answer option A is incorrect. Certificate security involves encrypting documents and verifying a digital signature. A digital signature helps in assuring recipients that the document came from a user. Encryption helps in ensuring that only the intended recipient can view the contents. A certificate is used to store the public key component of a digital ID.When a PDF is secured by a user using a certificate, the user specifies the recipients and defines the file access level for each recipient or group. For instance, a user can permit one group to sign and fill forms and another to edit text or remove pages.Answer option D is incorrect. Application (software) security includes customizing Acrobat and Reader security features in order to protect against vulnerabilities, malicious attacks, and other risks. Advanced users can customize the application with the help of the user interface. Enterprise administrators can also configure the registry.
