NEW QUESTION: 1 What gives employees the responsibility to make decisions regarding their own jobs and tasks?**A.** Quality Circle**B.** Employee Empowerment**C.** Employee Support**D.** Concurrent engineering**Answer: B**Explanation:Employee empowerment gives employees the responsibility to make decisions regardingtheir own jobs and tasks?

NEW QUESTION: 2조직의 독립성을 유지하기 위해 최고 감사 책임자는 [List A]에 기능적으로 [List B]에 관리적으로 보고해야 합니다.[목록 A][목록 B]**A.** 감사위원회 이사회**B.** 최고 경영자 최고 재무 책임자**C.** 감사위원회 최고 재무 책임자**D.** CEO**Answer: D**

NEW QUESTION: 3 Which of the following answers is directly related to providing High Availability to your users?**A.** Backup data circuits**B.** Good hiring practices**C.** Senior Executive Support**D.** Updated Antivirus Software**Answer: A**Explanation:When planning for high availability, any critical component of your data network should have some sort of redundancy or backup plan in case it does fail.Usually this involves things like backup data circuits, fault tolerant systems and otherwise redundant technology across the board.This can include items like these:-RAID array disks on servers so that if any single drive fails the server remains available.-Backup network connections. Many internet services providers provide these for a fee.-Backup power for all systems and circuits.-Fire suppression and evacuation plans.-A data backup practice to backup and restore data while storing backups offsite in a safe, remote location.Also critical to high availability is a well-planned and tested disaster recovery plan. You can eitherdevelop one, find one free online or pay a contract agency to develop one for you.The lines get a little blurry between fault tolerance and high availability because one is the direct result of the other but the questions on the exam should be pretty clear.The following answers are incorrect:-Good hiring practices: High Availability doesn't really involve good hiring practices but when you higher good technicians you availability would definitely improve. -Updated Antivirus Software: This isn't directly related to high availability, although it's a

critical part of defense in depth.-Senior Executive Support: While this is important for funding equipment for high availability it isn't directly related to providing the high availability.The following reference(s) was used to create this question: 2013. Official Security+ Curriculum.

NEW QUESTION: 4 Case study 1 - Litware IncBackgroundYou are a developer for Litware Inc., a SaaS company that provides a solution for managing employee expenses. The solution consists of an ASP.NET Core Web API project that is deployed as an Azure Web App.Overall architecture Employees upload receipts for the system to process. When processing is complete, the employee receives a summary report email that details the processing results. Employees then use a web application to manager their receipts and perform any additional tasks needed for reimbursement.Receipt processingEmployees may upload receipts in two ways:* Uploading using an Azure Files mounted folder* Uploading using the web applicationData StorageReceipt and employee information is stored in an Azure SQL database.DocumentationEmployees are provided with a getting started document when they first use the solution. The documentation includes details on supported operating systems for Azure File upload, and instructions on how to configure the mounted folder.Solution detailsUsers tableWeb ApplicationYou enable MSI for the Web App and configure the Web App to use the security principal name.Processing Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime.Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user.Requirements Receipt processingConcurrent processing of a receipt must be prevented.LoggingAzure Application Insights is used for telemetry and logging in both the processor and the web application. The processor also has TraceWriter logging enabled. Application Insights must always contain all log messages.Disaster recoveryRegional outage must not impact application availability. All DR operations must not be dependent on application running and must ensure that data in the DR region is up to date.Security* Users' SecurityPin must be stored in such a way that access to the database does not allow the viewing of SecurityPins. The web application is the only system that should have access to SecurityPins.* All certificates and secrets used to secure data must be stored in Azure Key Vault.* You must adhere to the Least Privilege Principal.* All access to Azure Storage and Azure SQL database must use the application's Managed Service Identity (MSI)* Receipt data must always be encrypted at rest.* All data must be protected in transit.* User's expense account number must be visible only to logged in users. All other views of the expense account number should include only the last segment with the remaining parts obscured.* In the case of a security breach, access to all summary reports must be revoked without impacting other parts of the system.IssuesUpload format issueEmployees occasionally report an issue with uploading a receipt using the web application. They report that when they upload a receipt using the Azure File Share, the receipt does not appear in their profile. When this occurs, they delete the file in the file share and use the web application, which returns a 500 Internal Server error page.Capacity issueDuring busy periods, employees report long delays between the time they upload the receipt and when it appears in the web application.Log capacity issueDevelopers report that the number of log messages in the trace output for the processor is too high, resulting in lost log messages. Processing.csDatabase.csReceiptUploader.csConfigureSSE.ps1Hotspot QuestionYou need to configure retries in the LoadUserDetails function in the Database class without impacting user experience.What code, should you insert on line DB07?To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation:Box 1: PolicyRetryPolicy retry = Policy .Handle<HttpRequestException>().Retry(3);The above example will create a retry policy which will retry up to three times if an action fails with an exception handled by the Policy.Box 2: WaitAndRetryAsync(3,i => TimeSpan.FromMilliseconds(100* Math.Pow(2,i-1))); A common retry strategy is exponential backoff: this allows for retries to be made initially quickly, but then at progressively longer intervals, to avoid hitting a subsystem with repeated frequent calls if the

subsystem may be struggling.Example:Policy.Handle<SomeExceptionType>().WaitAndRetry(3, retryAttempt =>TimeSpan.FromSeconds(Math.Pow(2, retryAttempt)));References: https://github.com/App-vNext/Polly/wiki/Retry
