NEW QUESTION: 2 You are in charge of creating a Cloudformation template that will be used to spin our resources on demand for your Devops team. The requirement is that this cloudformation template should be able to spin up resources in different regions. Which of the following aspects of Cloudformation templates can help you design the template to spin up resources based on the region?
A. Use the parameters section in the Cloudformation template, so that based on the relevant region, the relevant resource can be spun up.
B. Use mappings section in the Cloudformation template, so that based on the relevant region, the relevant resource can be spun up.
C. Use the metadata section in the Cloudformation template, so that based on the relevant region, the relevant resource can be spun up.
D. Use the outputs section in the Cloudformation template, so that based on the relevant region, the relevant resource can be spun up.
Answer: B
Explanation: Explanation
The AWS Documentation mentions The optional Mappings section matches a key to a corresponding set of named values. For example, if you want to set values based on a region, you can create a mapping that uses the region name as a key and contains the values you want to specify for each specific region. You use the Fn::FindInMap intrinsic function to retrieve values in a map. For more information on mappings please refer to the below link:
<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/mappings-section-structure.html>
