Our 1D0-671 exam material's efficient staff is always prompt to respond you, We own all kinds of top-level 1D0-671 exam torrent to assist you pass the exam.

NEW QUESTION: 1A. Option CB. Option DC. Option BD. Option FE. Option EF. Option A

Answer: B,C,FExplanation:

http://www.cisco.com/en/US/tech/tk389/tk621/technologies_white_paper09186a0080094cfa.shtmlConvergence Cisco enhanced the original 802.1D specification with features such as Uplink Fast, Backbone Fast, and Port Fast to speed up the convergence time of a bridged network. The drawback is that these mechanisms are proprietary and need additional configuration. Alternate and Backup Port Roles These two port roles correspond to the blocking state of 802.1D. A blocked port is defined as not being the designated or root port. A blocked port receives a more useful BPDU than the one it sends out on its segment. Remember that a port absolutely needs to receive BPDUs in order to stay blocked. RSTP introduces these two roles for this purpose. Rapid Transition to Forwarding State Rapid transition is the most important feature introduced by 802.1w. The legacy STA passively waited for the network to converge before it turned a port into the forwarding state. The achievement of faster convergence was a matter of tuning the conservative default parameters (forward delay and max_age timers) and often put the stability of the network at stake. The new rapid STP is able to actively confirm that a port can safely transition to the forwarding state without having to rely on any timer configuration. There is now a real feedback mechanism that takes place between RSTP-compliant bridges. In order to achieve fast convergence on a port, the protocol relies upon two new variables: edge ports and link type.

NEW QUESTION: 2Which configuration can you add to Mobile Connect to explicitly allow or block calls to remote destinations based on the caller ID of the caller?**A. call anchoringB. route filterC. access listD. external call control****Answer: C**

NEW QUESTION: 3With which of the following processes is Problem Management least likely to interface on a regular basis?**A. Incident ManagementB. Availability ManagementC. Change ManagementD. IT Financial Management****Answer: D**
