NEW QUESTION: 1 Which of the following connectors are used with fiber-optic cables? Each correct answer represents a complete solution. Choose three. **A. SC B. MT-RJ C. F-Type D. ST**

Answer: A, B, D Explanation: Following connectors are used with fiber-optic cables: SC connector: A subscriber connector (SC) is a fiber-optic connector used with multimode fiber. It is a square shaped connector used for terminating fiber optic cables. SC connectors have a push-pull latching mechanism to provide quick insertion and removal while also ensuring a positive connection. ST connector: A straight tip (ST) connector is a fiber-optic connector used with multimode fiber. An ST connector has a 2.5mm shaft and bayonet locking ring, and allows quick connect and disconnect of 125 micron multi-mode fiber. MT-RJ connector: The MT-RJ connector is the most recent type of small form factor fiber optic connector. The MT-RJ fiber connector is less than half the size of the SC duplex connector and transceiver, so it doubles the port density of fiber-optic LAN equipment. The connector is a 2-fiber connector and takes up no more room than an RJ-45 jack. Answer option D is incorrect. An F-type connector is a threaded medium performance coaxial signal connector, which is used in TVs and VCRs. The pin of the connector is actually the center conductor of the coaxial cable. It is an inexpensive connector.

NEW QUESTION: 2 DRAG DROP **Answer:** Explanation:

NEW QUESTION: 3 Which three protocols can use enhanced object tracking? (Choose three.) **A. VRRP B. NTP C. GLBP D. Proxy-ARPE. DHCP F. HSRP** **Answer: A, C, F** Explanation: The Enhanced Object Tracking feature separates the tracking mechanism from HSRP and creates a separate standalone tracking process that can be used by other processes and HSRP. This feature allows tracking of other objects in addition to the interface line-protocol state. A client process such as HSRP, Virtual Router Redundancy Protocol (VRRP), or Gateway Load Balancing Protocol (GLBP), can register its interest in tracking objects and then be notified when the tracked object changes state.
