**NEW QUESTION: 1** Many state legislatures are considering proposals to the effect that certain policies should be determined not by the legislature itself but by public referenda in which every voter can take part. Critics of the proposals argue that the outcomes of public referenda would be biased, since wealthy special-interest groups are able to influence voters' views by means of television advertisements. Which of the following, if true, most strengthens the critics' argument?  
**A.** Many state legislators regard public referenda as a way of avoiding voting on issues on which their constituents are divided.  
**B.** Television stations are reluctant to become associated with any one political opinion, for fear of losing viewers who do not share that opinion.  
**C.** During elections for members of the legislature, the number of people who vote is unaffected by whether the candidates run television advertisements or not.  
**D.** Proponents of policies that are opposed by wealthy special-interest groups are often unable to afford advertising time on local television stations.  
**E.** Different special-interest groups often take opposing positions on questions of which policies the state should adopt.

**NEW QUESTION: 4** Your company has a main office and a branch office. The main office contains a file server named Server1. Server1 has the BranchCache for Network Files role service installed. The branch office contains a server named Server2. Server2 is configured as a BranchCache hosted cache server. You need to preload the data from the file shares on Server1 to the cache on Server2. What should you run first?  
**A.** Add-BCDataCacheExtension  
**B.** Export-BCCachePackage  
**C.** Publish-BCFileContent  
**D.** Set-BCCache  
**Answer: C**  
Explanation:  
Explanation See step 2 below. To prehash content and preload the content on hosted cache servers\* Log on to the file or Web server that contains the data that you wish to preload, and identify the folders and files that you wish to load on one or more remote hosted cache servers.  
\* Run Windows PowerShell as an Administrator. For each folder and file, run either the Publish-BCFileContent command or the Publish-BCWebContent command, depending on the type of content server, to trigger hash generation and to add data to a data package.\* After all the data has been added to the data package, export it by using the Export-BCCachePackage command to produce a data package file.\* Move the data package file to the remote hosted cache servers by using your choice of file transfer technology. FTP, SMB, HTTP, DVD and portable hard disks are all viable transports.\* Import the data package file on the remote hosted cache servers by using the Import-BCCachePackage command.
