**NEW QUESTION: 2**Application performance test cases are most accurate if based on.**A.** vendor best practices**B.** quantitative success criteria**Answer: B**  
**Explanation:**The best validation is to place a platform under a typical test of what it will be faced with in the field—for example, having a simulated number of users go through a workflow (perhaps a website). A lot of these tasks vary with the type of application and are primarily application functionality based. In addition, platform or infrastructure metrics are key for validation and for information to be used within the operational documentation (for example, troubleshooting guide, monitoring recommendations).

**NEW QUESTION: 4**View the exhibit and examine the output. Which statement can be an inference from the output?  
**Exhibit:****A.** The least number of I/Os are performed on the last data file in the list**B.** The number of times that the backup or restore process directed the OS to wait until an I/O was complete is the highest for the last data file in the list**C.** The FRA disk group has an asynchronous I/O bottleneck**D.** The number of times that the backup or restore process made an OS call to poll for I/O completion in Nonblocking mode is the least for the FRA disk group**Answer: C**  
**Explanation:**NO EXHIBIT - ANSWER impossible / A) is set as placeholder Oracle Press 1Z0-053 Exam Guide, Chapter 8: Monitoring and Tuning RMAN Monitoring Asynchronous I/O To monitor asynchronous I/O operations, you use the dynamic performance view V\$BACKUP\_ASYNC\_IO. The key columns to watch are the following:  
-IO\_COUNT: Number of I/Os performed on the file  
-LONG\_WAITS: Number of times the backup or restore process had to tell the OS to wait for the I/O to complete  
-SHORT\_WAIT\_TIME\_TOTAL: Total time, in hundredths of a second, taken for nonblocking polling for I/O completion  
The largest ratio of LONG\_WAITS to IO\_COUNT is a likely bottleneck in the backup process. SHORT\_WAIT\_TIME\_TOTAL and LONG\_WAIT\_TIME\_TOTAL are also indicators of a bottleneck if they are nonzero. For these two files, you may consider increasing the multiplexing to decrease or eliminate the wait times when backing them up.  
**Exam Tip:**If you are using synchronous I/O but you have set BACKUP\_DISK\_IO\_SLAVES to TRUE, then the I/O performance is monitored in V\$BACKUP\_ASYNC\_IO.
