NEW QUESTION: 1組織は、悪意のあるコンテンツのダウンロードの増加に気づき、Cisco Umbrellaを使用して、通常のWebトラフィックを許可しながら、疑わしいドメインに対するこのアクティビティを防止したいと考えています。どのアクションがこのタスクを実行しますか？**A.** アプリケーションブロックリストを構成します。**B.** 宛先ブロックリストを使用します。**C.** インテリジェントプロキシを設定します。**D.** コンテンツ設定を[高]に設定します**Answer: C**
Explanation: Obviously, if you allow all traffic to these risky domains, users might access malicious content, resulting in an infection or data leak. But if you block traffic, you can expect false positives, an increase in support inquiries, and thus, more headaches. By only proxying risky domains, the intelligent proxy delivers more granular visibility and control. The intelligent proxy bridges the gap by allowing access to most known good sites without being proxied and only proxying those that pose a potential risk. The proxy then filters and blocks against specific URLs hosting malware while allowing access to everything else.

NEW QUESTION: 2**A.** Option **B.** Option **A.** Option **C.** Option **D****Answer: D**
Explanation The AWS Documentation mentions Each time you upload a new version of your application with the Clastic Beanstalk console or the CB CLI, Elastic Beanstalk creates an application version. If you don't delete versions that you no longer use, you will eventually reach the application version limit and be unable to create new versions of that application. You can avoid hitting the limit by applying an application version lifecycle policy to your applications. A lifecycle policy tells Clastic Beanstalk to delete application versions that are old, or to delete application versions when the total number of versions for an application exceeds a specified number. For more information on Clastic Beanstalk lifecycle policies please see the below link:*
