NEW QUESTION: 2Based on the exhibit,Which zone(s) represent mixed zoning?**A.** Zone 3**B.** Zone 2**C.** Zones 1 and 2**D.** Zone 1**Answer: A****Explanation:**Types of Zoning Zoning can be categorized into three types:Port zoning: Uses the the physical address of switch ports to define zones. In port zoning,access to node is determined by the physical switch port to which a node is connected. Thezone members are the port identifier (switch domain ID and port number) to which HBAand its targets (storage devices) are connected. If a node is moved to another switch portin the fabric, port zoning must be modified to allow the node, in its new port, to participate in its original zone. However, if an HBA or storage device port fails, an administrator justhas to replace the failed device without changing the zoning configuration.WWN zoning: Uses World Wide Names to define zones. The zone members are theunique WWN addresses of the HBA and its targets (storage devices). A major advantageof WWN zoning is its flexibility. WWN zoning allows nodes to be moved to another switchport in the fabric and maintain connectivity to its zone partners without having to modify thezone configuration. This is possible because the WWN is static to the node port.Mixed zoning: Combines the qualities of both WWN zoning and port zoning. Using mixedzoning enables a specific node port to be tied to the WWN of another

node. Figure in the slide shows the three types of zoning on an FC network. EMC E10-001 Student Resource Guide. Module 5: Fibre Channel Storage Area Network (FC SAN)
