We recommend the customers to try out the **C\_SIGPM\_2403 Valid Test Preparation** free trial sessions by downloading the exam demo before buying the paid version.

**NEW QUESTION: 1** Refer to the exhibit. Why has this switch not been elected the root bridge for VLAN1?  
**A.** It has more than one interface that is connected to the root network segment.  
**B.** It has a higher MAC address than the elected root bridge.  
**C.** It is running RSTP while the elected root bridge is running 802.1d spanning tree.  
**D.** It has a higher bridge ID than the elected root bridge.  
**Answer: D**  
**Explanation:** Explanation/Reference: Explanation: When a switch receives a BPDU, it first compares priority, the lower number wins. If a tie, compare MAC, the smaller one wins. Here Switch has 32769 priorities which is greater than 20481 so switch will not elect for root bridge. It says the bridge priority for Switch is 32769, and the root priority is 20481. Which means that some other switch has the lower priority and won the election for VLAN 1.

**NEW QUESTION: 2** What is the recommended Web service development approach when developing a Web service from scratch?  
**A.** meet-in-the-middle  
**B.** round-trip  
**C.** top-down  
**D.** bottom-up  
**Answer: C**

**NEW QUESTION: 3** Refer to the exhibit. A network engineer has configured GRE between two IOS routers. The state of the tunnel interface is continuously oscillating between up and down. What is the solution to this problem?  
**A.** Create a more specific static route to define how to reach the remote router.  
**B.** Save the configuration and reload the router.  
**C.** Check whether the internet service provider link is stable  
**D.** Create a more specific ARP entry to define how to reach the remote router.  
**Answer: A**
