You may never have thought that preparing for the upcoming H21-282_V2.0 certification exam would be so simple, Discount and reasonable price.

NEW QUESTION: 1 Which two create an instance of an array? (Choose Two) **A.** `int ia [][] = (4, 5, 6) (1, 2, 3)` **B.** `float fa = new float [20]`; **C.** `int[] ia = new int [15]`; **D.** `char[] ca = "Some String"`; **E.** `Object oa = new float[20]`; **Answer: C,E**

NEW QUESTION: 2 To complete the sentence, select the appropriate option in the answer area.
Answer: Explanation:

NEW QUESTION: 3 **HOTSPOT** **Answer:** Explanation: Virtual machines can be deployed to Hyper-V using Windows Deployment Services (WDS). To accomplish this requires the proper WDS infrastructure be in place and that the VMPXE boot using a Legacy Network Adapter. By default, there is only a "Standard Network Adapter" installed on the Virtual Machine, but for PXE functionality you will need to add a "Legacy Network Adapter". Go to the "Legacy Network Adapter" that you just added and specify that it should use the Virtual Switch that you just created. Last but not least, you should change the BIOS boot priority to make sure that the Virtual Machine always tries to boot first using the "Legacy Network Adapter". Just select the "Legacy Network Adapter" and move it to the top using the buttons. Start your Virtual Machine and now PXE boot should work. The Pre-Boot Execution Environment (PXE) provider for Windows Deployment Services provides client boot services over the network. It registers itself with the WDS Server service (the main server-side service of the Windows Deployment Services solution) and requests a remote procedure call (RPC) endpoint. After the Windows Deployment Services server role is installed, you must configure the server by using either the Windows Deployment Services MMC snap-in or the /Initialize-Server command-line option. The PXE provider must be configured properly before it can provide client boot services over the network. References:
