Now, let's start your preparation with CIS-CPG training material, So contact us by the first time you meet us, it's a great opportunity for you to be a winner.

And this is why a great number people turn to question centers [CIS-CPG](#) in which they have access to millions of questions selected from the tests in the previous years, Proper training for ServiceNow CIS-CPG begins with preparation products designed to deliver real ServiceNow CIS-CPG results by making you pass the test the first time.

**NEW QUESTION: 1** DRAG DROP You need to configure the content types and page layouts that are used to display information about the members of the board of directors. How should you configure the content types and page layouts? (To answer, drag the appropriate content types to the correct location in the answer area. Each content type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

**Answer:** Explanation: Topic 4, Adventure Works Background Adventure Works needs to develop a solution that tracks internal and external projects for both on-site and off-site employees. The company plans to create a project tracking site by using SharePoint. Business Requirements The company has the following requirements: The solution must use data from an existing line of business (LOB) system. The solution must provide secure access to data. The solution must allow users to search for projects by department or job role. The portal for the solution must contain an overview of all the active projects. Navigation for all sites must be managed centrally. Project members must be notified when project information changes. Project leads must be able to view a list of departments and job roles. Project leads must be notified when project tasks change.----- Users must be able to filter project documents by file type. Technical Requirements The solution must include the following components. Business Connectivity Services (BCS) - You must use BCS to connect to a SQL Server database to retrieve project information and display it on a Project Information Page. - The Admin Custom List app must use a remote event receiver to send an email message to each team member when information is updated. - The Project external content type must use the root namespace proj\_info. Managed Metadata Service (MMS) You must use MMS to ensure that team members can search and filter project information. - Managed data must be grouped and controlled by department leaders. The project lead must have full control of the term store. The project leader creates groups for each department and assigns the leader of each department to the group manager role. - Group managers must be able to grant Contribute permissions to the remaining team members in their department. - You must create a Department term set to store team member roles and organize them by department types. The import file for the Department term set is the default for all new projects. The import file contains terms for System Architect, Programmer, Producer, and Manager. Each term is contained within two parent groups, Engineering or Production. Managers are members of the Production group only. All of the parent groups use a shared root-level term. You must create a site collection to store content that is used across multiple site collections. The site collection stores term sets for cross-site navigation and searches. The navigation site must use the URL <http://adventureworks/sites/navigation>. The publishing site must use the URL <http://adventureworks/sites/portal>. Navigation links on the top and left sides of each page must use term sets. The Document Library app named Project Documents must include a local term set for document types. The term set must contain the default terms .docx, .png, and .jpg. You

must develop a console app to print the current term sets and each root term for the app by using the following style: TermSet : name Term : name- ---- -Application Structure Relevant segments of the app files are shown below: (Line numbers in the code segments are included for reference only and include a two-character prefix that denotes the specific file to which they belong.) DocumentLibApp.es TeamRemoteEventReceiver.es TodoEventReceiver.es ImportTermSet.es

**NEW QUESTION: 2** A. Unified Communications B. Unified Computing C. Cisco TelePresence D. Unified Access E. Collaboration Applications F. Customer Collaboration **Answer: A,C,E,F**

**NEW QUESTION: 3** You work as an Office Assistant for Media Perfect Inc. You have created a spreadsheet in Excel 2013 and shared it with the other employees of the company. You select the Encrypt with Password option as a protection measure for the document you are sharing. Now, you have to specify a password in the Password box in the Encrypt Document dialog box appeared for editing the document. But you have forgotten the password. What will happen in this situation? A. You will use a new password. B. You will ask Microsoft to retrieve the password. C. You will fetch the password from the list in which you have saved it. D. You will create a new document. **Answer: C** Explanation: The various Protect Workbook options are as follows: 1. Mark as Final: This option is used to make the document read-only. When a spreadsheet is marked as final, various options such as typing, editing commands, and proofing marks are disabled or turned off and the spreadsheet becomes read-only. This command helps a user to communicate that he is sharing a completed version of a spreadsheet. This command also prevents reviewers or readers from making inadvertent modifications to the spreadsheet. 2. Encrypt with Password: When a user selects the Encrypt with Password option, the Encrypt Document dialog box appears. In the Password box, it is required to specify a password. Microsoft is not able to retrieve lost or forgotten passwords, so it is necessary for a user to keep a list of passwords and corresponding file names in a safe place. 3. Protect Current Sheet: This option is used to select password protection and permit or prohibit other users to select, format, insert, delete, sort, or edit areas of the spreadsheet. This option protects the worksheet and locked cells. 4. Protect Workbook Structure: This option is used to select password protection and select options to prevent users from changing, moving, and deleting important data. This feature enables a user to protect the structure of the worksheet. 5. Restrict Permission by People: This option works on the basis of Window Rights Management to restrict permissions. A user is required to use a Windows Live ID or a Microsoft Windows account to restrict permissions. These permissions can be applied via a template that is used by the organization in which the user is working. These permissions can also be added by clicking Restrict Access. 6. Add a Digital Signature: This option is used to add a visible or invisible digital signature. It authenticates digital information such as documents, e-mail messages, and macros by using computer cryptography. These signatures are created by specifying a signature or by using an image of a signature for establishing authenticity, integrity, and non-repudiation. **Answer option D is incorrect.** You can create a new document with the same details but it will increase the overhead and is a very time consuming process. **Answer option D is incorrect.** You can create a new document with the same details but it will increase the overhead and is a very time consuming process.
