This is the BEST deal at only few dollar for unlimited access, And if you click on our E_ACTAI_2403 practice questions, you will feel the convenience.

NEW QUESTION: 1 Your company plans to deploy several apps that will use Azure Cognitive Services APIs.You need to recommend which Cognitive Services APIs must be used to meet the following requirements:* Must be able to identify inappropriate text and profanities in multiple languages.* Must be able to interpret user requests sent by using text input.* Must be able to identify named entities in text.Which API should you recommend for each requirement? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:ExplanationBox 1: Content ModeratorThe Azure Content Moderator API is a cognitive service that checks text, image, and video content for material that is potentially offensive, risky, or otherwise undesirable. When such material is found, the service applies appropriate labels (flags) to the content. Your app can then handle flagged content in order to comply with regulations or maintain the intended environment for users.
Box 2: Language Understanding (LUIS)Designed to identify valuable information in conversations, LUIS interprets user goals (intents) and distills valuable information from sentences (entities), for a high quality, nuanced language model. LUIS integrates seamlessly with the Azure Bot Service, making it easy to create a sophisticated bot.Box 3: Text Analytics The Text Analytics API is a cloud-based service that provides advanced natural language processing over raw text, and includes four main functions: sentiment analysis, key phrase extraction, named entity recognition, and language detection.References:

NEW QUESTION: 2 Which type of authentication server could an engineer configure in order to provide the use of RSA token authentication as a permitted authentication method to access a AAA Virtual Server?**A.** SAML**B.** Negotiate**C.** RADIUS**D.** LDAP**Answer: C**Explanation:
Explanation/Reference:Explanation:http://support.citrix.com/article/CTX127543This document describes how to configure Access Gateway 5.0 for authentication against an RSA SecureID Authentication server. It describes the configuration required in both the Access Gateway and

the RSA server for various deployment topologies.Within the RSA Authentication Manager console, choose Agent Host > Generate Configuration Files and select for One Agent Host, and choose the Agent Host created in step 1 and save the generated sdconf.rec file.If using RSA 7.1 Open the RSA Security Console and navigate to Access > Authentication Agents > Add New. Enter the name and IP Address of the Access Gateway, and set Agent type to Standard Agent. Save this new agent.Select Access > Authentication Agents > Generate Configuration File and generate the configuration file.There is no option to generate a configuration file for a single host in RSA 7.1. Save and extract the sdconf.rec from the generated zip file.Log on to the Access Gateway AdminLogonPoint and go to Authentication Profiles to create an RSA authentication profile. Browse to the generated sdconf.rec file on your computer to upload it on the Appliance, and save the profile.Additional Notes for Creating the Agent Record in RSA. The details entered into the Agent Host configuration are specific, and depend on the deployment configuration of your Access Gateway. The following are the different deployment methods and the associated configuration within the RSA Agent:Access Gateway is a non-HA deployment in one-arm mode. Network Address: IP address of Access GatewayAccess Gateway is a non-HA deployment in two-arm mode, traffic to the RSA server is through the interface with the Internal roleNetwork Address: IP address of the interface with the Internal role Access Gateway is a non-HA deployment in two-arm mode, traffic to the RSA server is through the interface with the External role.Network Address: IP address of the interface with the Internal role Secondary Nodes: IP address of the interface with the External role Access Gateway is in an HA deployment in one-arm mode Network Address: The HA Virtual IP addressSecondary Nodes: The physical IP addresses of both Access Gateways Access Gateway is in an HA deployment in two-arm mode, traffic to the RSA server is through the interface marked as INTERNAL Network Address: The HA Internal virtual IP addressSecondary Nodes: The physical IP addresses of the interfaces with the Internal role on both Access GatewaysAccess Gateway is in an HA deployment in two-arm mode, traffic to the RSA server is through the interface marked as EXTERNALNetwork Address: The HA Internal virtual IP addressSecondary Nodes: The physical IP addresses of the interfaces with the External role on both Access Gateways*In RSA 7.1 Secondary Nodes have been renamed to Alternate IP Addresses in the Authentication Agent configuration.

NEW QUESTION: 3 You install Dynamics CRM 2015 on a server on the internal network.You need to provide several users with the ability to use Dynamics CRM client applications to connect to Dynamics CRM from the InternetWhich server role should you add to the deployment?**A.** Active Directory Federation Services**B.** Remote Access**C.** Active Directory Lightweight Directory Services**D.** Web Server (IIS)**Answer: D**Explanation:To let users access the application over the Internet, the server that is running Internet Information Services (IIS) where the Microsoft Dynamics CRM application is installed must be available over the Internet.
