App1 の YAML 構成に 準備プローブを追加します。 **Answer: D** Explanation: For containerized applications that serve traffic, you might want to verify that your container is ready to handle incoming requests. Azure Container Instances supports readiness probes to include configurations so that your container can't be accessed under certain conditions. The readiness probe behaves like a Kubernetes readiness probe. For example, a container app might need to load a large data set during startup, and you don't want it to receive requests during this time. YAML is used to setup a liveness probe. Reference:
