Are you going to take the SAP C-ARSCC-2308 exam?

NEW QUESTION: 1

会社は、AWSアカウントに特権ユーザーを定義しています。これらのユーザーは、会社で定義されている主要なリソースの管理者です。現在、これらのユーザーのセキュリティ認証を強化することが義務付けられています。どうすればこれを達成できますか？選んでください：**A.**

これらのユーザーアカウントのMFAを有効にします**B.**

これらのユーザーアカウントのバージョン管理を有効にします**C.**

ユーザーのルートアクセスを無効にします**D.**

これらのユーザーアカウントの誤った削除を有効にする**Answer: A**
Explanation: The AWS Documentation mentions the following as a best practices for IAM users. For extra security, enable multi-factor authentication (MFA) for privileged IAM users (users who are allowed access to sensitive resources or APIs). With MFA, users have a device that generates unique authentication code (a one-time password, or OTP). Users must provide both their normal credentials (like their user name and password) and the OTP. The MFA device can either be a special piece of hardware, or it can be a virtual device (for example, it can run in an app on a smartphone). Option B, C and D are invalid because no such security options are available in AWS For more information on IAM best practices, please visit the below URL

<https://docs.aws.amazon.com/IAM/latest/UserGuide/best-practices.html> The correct answer is: Enable MFA for these user accounts Submit your Feedback/Queries to our Experts

NEW QUESTION: 2 You are the DBA supporting an Oracle 11g Release 2 database and wish to move a table containing several DATE, CHAR, VARCHAR2, and NUMBER data types, and the table's indexes, to another tablespace. The table does not have a primary key and is used by an OLTP application. Which technique will move the table and indexes while maintaining the highest level of availability to the application? **A.** Edition-Based Table Redefinition. **B.** Online Table Redefinition. **C.** An ALTER TABLE MOVE to move the table and ALTER INDEX REBUILD to move the indexes. **D.** Oracle Data Pump. **E.** An ALTER TABLE MOVE to move the table and ALTER INDEX REBUILD ONLINE to move the indexes. **Answer: B**
Explanation: * Oracle Database provides a mechanism to make table structure modifications without significantly affecting the availability of the table. The mechanism is called online table redefinition. Redefining tables online provides a substantial increase in availability compared to traditional methods of redefining tables. * To redefine a table online: Choose the redefinition method: by key or by rowid * By key- Select a primary key or pseudo-primary key to use for the redefinition.

Pseudo-primary keys are unique keys with all component columns having NOT NULL constraints. For this method, the versions of the tables before and after redefinition should have the same primary key columns. This is the preferred and default method of redefinition.* By rowid-Use this method if no key is available. In this method, a hidden column named M_ROW\$\$ is added to the post-redefined version of the table. It is recommended that this column be dropped or marked as unused after the redefinition is complete. If COMPATIBLE is set to 10.2.0 or higher, the final phase of redefinition automatically sets this column unused. You can then use the ALTER TABLE ... DROP UNUSED COLUMNS statement to drop it. You cannot use this method on index-organized tables. Note:* When you rebuild an index, you use an existing index as the data source. Creating an index in this manner enables you to change storage characteristics or move to a new tablespace. Rebuilding an index based on an existing data source removes intra-block fragmentation. Compared to dropping the index and using the CREATE INDEX statement, re-creating an existing index offers better performance. Incorrect: Not E: Edition-based redefinition enables you to upgrade the database component of an application while it is in use, thereby minimizing or eliminating down time.

NEW QUESTION: 3 You want to shutdown a running Mysql Server cleanly. Which three commands that are valid on either Windows or Linux will achieve this? **A.** Shell> pkill -u mysql mysqld **safe** **B.** Shell> /etc/init.d/mysql stop **C.** Shell> net stop mysql **D.** Mysql> STOP PROCESS mysqld; **E.** Shell> nmc mysql shutdown **F.** Shell> mysqladmin -u root -p shutdown **G.** Shell> service mysql safe_exit **Answer: B,C,F**

NEW QUESTION: 4 Siehe Ausstellung. Was ist die nächste Hop-Adresse für Datenverkehr, der für Host 10.0.1.5 bestimmt ist? **A.** 10.0.1.4 **B.** 10.0.1.50 **C.** 10.0.1.3 **D.** Loopback **D. Answer: B**
