Please cheer up for your dreams and never give 1z1-106 up, So once you buy our study materials, you will save a lot of troubles, Experts of the 1z1-106 reliable training vce will have a check at the question pool every day to see whether it has been renewed.

1z1-106 valid exam format & 1z1-106 free practice pdf & 1z1-106 latest study material

The dumps contain all problems in the actual test, And our 1z1-106 learning materials are really cost-effective in this respect, The software version for 1z1-106 actual test questions and answers will be suitable for you.

We have exclusive information resource and skilled education experts so that we release high quality 1z1-106 bootcamp PDF materials with high passing rate, Experts groups offering help.

Every day, large numbers of people crowd into our website to browser our 1z1-106 study materials, Rather, it has become necessary in the most challenging scenario of IT enterprises.

You can think about whether these advantages are what C-IBP-2311 Latest Test Prep you need, Our product boosts many merits and useful functions to make you to learn efficiently and easily.

NEW QUESTION: 1 Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2.You view the effective policy settings of Server1 as shown in the exhibit. (Click the Exhibit button.)You need to ensure that an entry is added to the event log whenever a local user account is created or deleted on Server1.What should you do?**A.** In Servers GPO, modify the Advanced Audit Configuration settings.**B.** On Server1, attach a task to the security log.**C.** On Server1, attach a task to the system log.**D.** In Servers GPO, modify the Audit Policy settings.**Answer: A**
Explanation:Explanation:When you use Advanced Audit Policy Configuration settings, you need to confirm that these settings are not overwritten by basic audit policy settings. The following procedure shows how to prevent conflicts by blocking the application of any basic audit policy settings.Enabling Advanced Audit Policy ConfigurationBasic and advanced audit policy configurations should not be mixed. As such, it's bestpractice to enable Audit: Force audit policy subcategory settings (Windows Vista or later) tooverride audit policy category settings in Group Policy to make sure that basic auditing isdisabled. The setting can be found under Computer ConfigurationPoliciesSecuritySettingsLocal PoliciesSecurity Options, and sets the SCENoApplyLegacyAuditPolicyregistry key to prevent basic auditing being applied using Group Policy and the LocalSecurity Policy MMC snap-in.In Windows 7 and Windows Server 2008 R2, the number of audit settings for whichsuccess and failure can be tracked has increased to 53. Previously, there were nine basicauditing settings under Computer ConfigurationPoliciesWindows SettingsSecuritySettingsLocal PoliciesAudit Policy. These 53 new settings allow you to select only thebehaviors that you want to monitor and exclude audit results for behaviors that are of littleor no concern to you, or behaviors that create an excessive number of log entries. Inaddition, because Windows 7 and Windows Server 2008 R2 security audit policy can beapplied by using domain Group Policy, audit policy settings can be modified, tested, anddeployed to selected users and groups with relative simplicity.Audit Policy settings Any changes to user account and resource permissions.Any failed attempts for user logon.Any failed attempts for resource access.Any modification to the system files.Advanced Audit Configuration SettingsAudit compliance with important business-relatedand security-related rules by tracking precisely defined activities, such as:A group administrator has modified settings or data on servers that contain financeinformation.An employee within a defined group has accessed an important file.The correct system access control list (SACL) is applied to every file and folder or registrykey on a computer or file share as a verifiable safeguard against undetected access.In Servers GPO, modify the Audit Policy settings - enabling audit account managementsetting will generate events about account creation, deletion and so on.Advanced Audit Configuration SettingsAdvanced Audit Configuration Settings ->AuditPolicy-> Account Management -> Audit User Account ManagementIn Servers GPO, modify the Audit Policy settings - enabling audit account management setting will generate events about account creation, deletion and so on.http: //blogs. technet. com/b/abizerh/archive/2010/05/27/tracing-down-user-and-computeraccount-deletion-in-active-directory. aspx http: //technet. microsoft. com/en-us/library/dd772623%28v=ws. 10%29. aspx http: //technet. microsoft. com/en-us/library/jj852202(v=ws. 10). aspx http: //www. petri. co. il/enable-advanced-audit-policy-configuration-windows-server. htm http: //technet. microsoft. com/en-us/library/dd408940%28v=ws. 10%29. aspx http: //technet. microsoft.
