The secret to balance your life Reliable AZ-500 Test Syllabus and study, We have tested the new version for many times.

NEW QUESTION: 1A company needs to improve their Hiring Process and hired a BPM analyst to analyze their current process. The analyst completed documenting the current state process of submitting the hiring request (refer to the process diagram below) and did a "Value-Add" Analysis with the process stakeholders.Identify the "Non-Value Add" activities in this process.**A.** "Inform Dept. of Labor" & "Terminate the application"**B.** "Complete the hiring request form correctly" & "Terminate the application"**C.** "Inform Dept. of Labor" & "Check to make sure budget is available"**D.** "Complete the hiring request form correctly" & "Check to make sure budget is available"**Answer: D**

NEW QUESTION: 2 How is Annualized Loss Expectancy (ALE) derived from a threat?**A.** SLE/EF**B.** ARO x (SLE - EF)**C.** SLE x ARO**D.** AV x EF**Answer: C**Explanation:Three steps are undertaken in a quantitative risk assessment:Initial management approvalConstruction of a risk assessment team, andThe review of information currently available within the organization.There are a few formulas that you MUST understand for the exam. See them below:SLE (Single Loss Expectancy)Single loss expectancy (SLE) must be calculated to provide an estimate of loss. SLE is defined asthe difference between the original value and the remaining value of an asset after a single exploit.The formula for calculating SLE is as follows: SLE = asset value (in $) x exposure factor (loss dueto successful threat exploit, as a %)Losses can include lack of availability of data assets due to data loss, theft, alteration, or denial ofservice (perhaps due to business continuity or security issues).ALE (Annualized Loss Expectancy)Next, the organization would calculate the annualized rate of occurrence (ARO).This is done to provide an accurate calculation of annualized loss expectancy (ALE).ARO is an estimate of how often a threat will be successful in exploiting a vulnerability over theperiod of a year.When this is completed, the organization calculates the annualized loss expectancy (ALE).The ALE is a product of the yearly estimate for the exploit (ARO) and the loss in value of an assetafter an SLE.The calculation follows ALE = SLE xARONote that this calculation can be adjusted for geographical distances using the local annualfrequency estimate (LAFE) or the standard annual frequency estimate (SAFE). Given that there isnow a value for SLE, it is possible to determine what the organization should spend, if anything, toapply a countermeasure for the risk in question.Remember that no countermeasure should be greater in cost than the risk it mitigates, transfers,or avoids.

Countermeasure cost per year is easy and straightforward to calculate. It is simply the cost of thecountermeasure divided by the years of its life (i.e., use within the organization). Finally, the organization is able to compare the cost of the risk versus the cost of the countermeasure and make some objective decisions regarding its countermeasure selection.The following were incorrect answers:All of the other choices were incorrect.The following reference(s) were used for this quesiton:Hernandez CISSP, Steven (2012-12-21). Official (ISC)2 Guide to the CISSP CBK, Third Edition((ISC)2 Press) (Kindle Locations 10048-10069). Auerbach Publications. Kindle Edition.

NEW QUESTION: 3 Upon learning about a user who has reused the same password for the past several years, a security specialist reviews the logs. The following is an extraction of the report after the most recent password change requirement:Which of the following security controls is the user's behavior targeting?**A.** Password history**B.** Password expiration**C.** Password reuse**D.** Password complexity**Answer: A**

NEW QUESTION: 4 You need to configure session affinity for the website.Which two actions will achieve the goal? Each correct answer presents a complete solution.**A.** Option A**B.** Option D**C.** Option C**D.** Option B**Answer: B,D**Explanation:Topic 9, File Tax-Related DocumentBackground You are developing an Azure solution that individuals and small businesses will use to prepare and file tax-related documents.Business RequirementsGeneralThe solution must provide a way for customers to enter personal and demographic information.Customers must be able to upload income documents and related documents to the solution. The solution must provide reports and summary documents for customers in PDF format.Scope and Device Accessibility The solution must support two operational modes: On-Peak and Off-Peak. On-Peak is defined as the first quarter of a year. Off-Peak is defined as the other three quarters of a year. Customers must be able to access the solution by using desktop computers, laptop computers, mobile devices, and tablets.High Availability and Business ContinuityThe solution must be available at all times. When the solution transitions between Off-Peak mode and On-Peak mode, solution availability must not be affected. Disaster recovery must be established for the customers' stored data.DiagnosticsThe solution must log relevant diagnostic data that can be used to troubleshoot the cloud service.ScalabilityThe solution must scale out while transitioning from Off-Peak mode to On-Peak mode.CostThe solution must use cloud resources optimally to minimize operating costs.Storage and SecurityThe solution must be secure to prevent any anonymous access (including read access) to the customers' tax documents. Cross-Premises NetworkingThe solution must extend the developers' on-premises network into Azure.Technical RequirementsThe logical design for the solution is shown in the following exhibit.Platform-as-a-Service (PaaS)The solution must have two roles: a web role and worker role. The web interface of the solution uses a web role to accept and send user input and any related documents. The worker role must access the stored data and prepare the tax documents in the background.ComputeThe solution must support a minimum of 10 role instances. When the solution is in On-Peak mode, each role instance must be allocated at least 6 GB of memory. The memory can be scaled down to 3 GB when the solution is in Off-Peak mode.The solution must cache documents locally. The cache does not need to be refreshed during the lifecycle of the worker role.Role instances that are running should not be affected by topology changes such as an increase in instance count.StorageThe web role must store documents in blob storage. A SQL database is used to store customer information. The worker role must use queues to process the final tax documents.Performance and ScalabilityWhen the solution is in Off-Peak mode, it must support at least 150 concurrent database sessions, and the maximum size of the database is 50 GB. When the solution is in On-Peak mode, it must support 750 concurrent database sessions, and the maximum size of the database is 300 GB. Geo-replication must be enabled and must be configurable by using the Azure management portal.Software PrerequisitesThe solution must install the software that is necessary to generate PDF documents on the server. The software will be provided as a Windows Installer

package.DebuggingSolution errors and warnings that occur in a web role must be logged. The worker role must log any crash dump files. Detailed information about errors and their context must be collected so that the environment in which errors occurred can be simulated locally. SecurityAt the time that a customer's tax information and documents are accepted, the solution must send an email to the customer. The email contains a secure hyperlink that the customer can use to upload any additional necessary documents. The customer is asked to upload these documents within 48 hours. If the customer does not upload the documents within 48 hours, the solution should not issue a new hyperlink. The solution must send an email to the customer to remind the customer to use the original hyperlink to upload any additional necessary documents.Network ServicesThe solution must use a cross-premises secure network. The network must be configurable by using the Azure management portal.Social StructureRelevant portions of the solution files are shown in the following code segments. Line numbers in the code segments are included for reference only and include a two-character prefix that denotes the specific file to which they belong.
