NEW QUESTION: 2A nurse is conducting a community teaching on issues of childhood safety. Which of the following age groups are at the highest risk for poisoning? **A.** 14 year-old who likes to repair bicycles **B.** 6 year-old who occasionally stays at home unattended **C.** 21 month-old who has just learned to climb stairs **D.** 7 month-old who stays with a brother 5 days a week **Answer:** **C** Explanation: Explanation: Toddlers are at most risk for poisoning because they are increasingly mobile, need to explore and engage in autonomous behavior.

NEW QUESTION: 3Which firewall type below uses a dynamic state table to inspect the content of packets? **A.** An application-level firewall **B.** A stateful-inspection firewall **C.** A packet-filtering firewall **D.** A circuit-level firewall **Answer:** **B** Explanation: A stateful-inspection firewall intercepts incoming packets at the Network level, then uses an Inspection Engine to extract state-related information from upper layers. It maintains the information in a dynamic state table and evaluates subsequent connection attempts. * packet-filtering firewall is the simplest type of firewall commonly implemented on routers. It operates at the Network layer and offers good performance but is the least secure. * application-level firewall or application-layer gateway, is more secure because it examines the packet at the application layer, but at the expense of performance. * circuit-level firewall, is similar to the application-level firewall in that it functions as a proxy server, but differs in that special proxy application software is not needed.
