NEW QUESTION: 1You work as a Network Administrator for www.company.com Inc. The organization uses the Windows 7 Professional operating system. You have discovered that computers have many unnecessary temporary files. Which of the following options will you choose to make sure that temporary files are removed on a regular basis? Each correct answer represents a complete solution. Choose all that apply.**A.** Run Disk Cleanup monthly.**B.** View alerts and take actions that can help keep Windows running smoothly.**C.** Search for files and delete unnecessary files.**D.** Create a task in Task Scheduler.**Answer: A,D****Explanation:**The Task Scheduler MMC snap-in helps a user schedule automated tasks that perform actions at a specific time or when a certain event occurs. It maintains a library of all scheduled tasks and provides an organized view of the tasks and a convenient point of access for managing them. The Disk Cleanup tool is used to reduce the number of unnecessary files on a hard disk to free up disk space and to help a computer run faster. It removes temporary files, empties the Recycle Bin, and removes a variety of system files and other items that are no longer needed. answer D is incorrect. Action Center is a central place to view alerts and take actions that can help keep Windows running smoothly. Action Center lists important messages about security and maintenance settings that need attention. Red items in Action Center are labeled Important and indicate significant issues that should be addressed soon, such as an outdated antivirus program that needs updating. Yellow items are suggested tasks that a user should consider addressing, like recommended maintenance tasks.

NEW QUESTION: 4 Examine the current value for the following parameters in your database instance: SGA_MAX_SIZE = 1024M SGA_TARGET = 700M DB_8K_CACHE_SIZE = 124M LOG_BUFFER = 200M You issue the following command to increase the value of DB_8K_CACHE_SIZE: SQL> ALTER SYSTEM SET DB_8K_CACHE_SIZE=140M; Which statement is true? **A.** It fails because an increase in DB_8K_CACHE_SIZE cannot be accommodated within SGA_MAX_SIZE. **B.** It fails because the DB_8K_CACHE_SIZE parameter cannot be changed dynamically. **C.** It fails because an increase in DB_8K_CACHE_SIZE cannot be accommodated within SGA_TARGET. **D.** It succeeds only if memory is available from the autotuned components if SGA. **Answer: A**
Explanation: * The SGA_TARGET parameter can be dynamically increased up to the value specified for the SGA_MAX_SIZE parameter, and it can also be reduced. * Example: For example, suppose you have an environment with the following configuration: SGA_MAX_SIZE = 1024M SGA_TARGET = 512M DB_8K_CACHE_SIZE = 128M In this example, the value of SGA_TARGET can be resized up to 1024M and can also be reduced until one or more of the automatically sized components reaches its minimum size. The exact value depends on environmental factors such as the number of CPUs on the system. However, the value of DB_8K_CACHE_SIZE remains fixed at all times at 128M * DB_8K_CACHE_SIZE Size of cache for 8K buffers * For example, consider this configuration: SGA_TARGET = 512M DB_8K_CACHE_SIZE = 128M In this example, increasing DB_8K_CACHE_SIZE by 16 M to 144M means that the 16M is taken away from the automatically sized components. Likewise, reducing DB_8K_CACHE_SIZE by 16M to 112M means that the 16M is given to the automatically sized components.
