TACACS+ Authentication Examples
The following example shows how to configure TACACS+ as the security protocol for PPP authentication:
aaa new-model
aaa authentication ppp test group tacacs+ local
tacacs-server host 10.1.2.3 tacacs-server key goaway
interface serial 0
ppp authentication chap pap test
The lines in the preceding sample configuration are defined as follows:
*The aaa new-model command enables the AAA security services.
*The aaa authentication command defines a method list, "test," to be used on serial interfaces running PPP. The keyword group tacacs+ means that authentication will be done through TACACS+. If TACACS+ returns an ERROR of some sort during authentication, the keyword local indicates that authentication will be attempted using the local database on the network access server.
