**NEW QUESTION: 1** The output of the show frame-relay pvc command shows "PVC STATUS = INACTIVE". What does this mean?  
**A.** The PVC is configured correctly, is operating normally, and is waiting for interesting traffic to trigger a call to the remote router.  
**B.** The PVC is configured correctly, is operating normally, and is no longer actively seeking the address of the remote router.  
**C.** The PVC is configured correctly and is operating normally, but no data packets have been detected for more than five minutes.  
**D.** The PVC is not configured on the local switch.  
**E.** The PVC is configured correctly on the local switch, but there is a problem on the remote end of the PVC.  
**Answer: E**  
**Explanation:** The PVC STATUS displays the status of the PVC. The DCE device creates and sends the report to the DTE devices. There are 4 statuses:  
+ ACTIVE: the PVC is operational and can transmit data  
+ INACTIVE: the connection from the local router to the switch is working, but the connection to the remote router is not available  
+ DELETED: the PVC is not present and no LMI information is being received from the Frame Relay switch  
+ STATIC: the Local Management Interface (LMI) mechanism on the interface is disabled (by using the "no keepalive" command). This status is rarely seen so it is ignored in some books.
