HP HP2-I71 exam bootcamp questions can help candidates have correct directions and prevent useless effort.

**NEW QUESTION: 1** Refer to the Exhibit: All internal clients behind the ASA are port address translated to the public outside interface, which has an IP address of 3.3.3.3. Client 1 and Client 2 have established successful SSL VPN connections to the ASA. However, when either client performs a browser search on their IP address, it shows up as 3.3.3.3. Why is this happening when both clients have a direct connection to the local internet service provider? **A.** Tunnel All Networks is configured under Group Policy. **B.** Same-security-traffic permit inter-interface has not been configured. **C.** Exclude Network List Below is configured under Group Policy. **D.** Tunnel Network List Below is configured under Group Policy. **Answer: A**

### NEW QUESTION: 2

管理者が、SwitchCからRouterCにpingとtelnetを実行しようとしていますが、結果は以下のとおりです。

RouterCに接続されているコンソールをクリックし、適切なコマンドを発行して質問に答えます。どちらが問題を修正し、telnetを無効にしたままpingのみが機能するようになりますか? **A.**

アクセスグループ106 inをインターフェイスfa0 / 0から削除し、アクセスグループ115

inを追加します。 **B.** アクセスグループ102をインターフェイスs0 /

0/0から削除し、アクセスグループ114を追加 **C.** アクセスグループ106 inをインターフェイスfa0 / 0から削除し、アクセスグループ104 inを追加します。 **D.** fa0 / 0のip

access-groupコマンドを「in」から「out」に変更します。 **E.** IPアドレスをインターフェイスfa0 / 1に正しく割り当てます。 **Answer: C** Explanation: Explanation

Let's have a look at the access list 104: The question does not ask about ftp traffic so we don't care about the two first lines. The 3rd line denies all telnet traffic and the 4th line allows icmp traffic to be sent (ping). Remember that the access list 104 is applied on the inbound direction so the 5th line "access-list 104 deny icmp any echo-reply" will not affect our icmp traffic because the "echo-reply" message will be sent over the outbound direction.

**NEW QUESTION: 3** Which statement describes the Oracle implementation of model-view-controller (MVC)? (Choose the best answer.) **A.** ADF Controller provides support for application tasks such as validation, state management, security, and business-process

orchestration.**B.** ADF bindings provide a layer of abstraction on top of the business services to enable the view and controller layers to work with different implementations of business services.**C.** Oracle ADF provides a "pure" implementation of MVC, with the model layer handling page navigation and encapsulating business logic.**D.** JSF Controller is the best choice for ADF Faces-based web applications because it enables you to break up an application's page flow into re-usable flows.**Answer: B**Explanation:Explanation/Reference:Explanation:The Role of Oracle ADF for J2EE ApplicationsJDeveloper includes an integrated J2EE runtime framework known as Oracle Application Development Framework (Oracle ADF) . Oracle ADF increases the cooperation between the MVC layers both in the design time and the runtime and, importantly, eases the incorporation of complex business services into the application model layer. Specifically, ADF provides these benefits to J2EE application development:\* Provides a thin model layer that adapts diverse business services, thus permitting views to be created in a similar fashion, independent of their data source/Model layer - A thin model layer that adapts and combines a full range of business services as desired, including Oracle ADF Business Components, Oracle TopLink mappings, JavaBeans, Enterprise JavaBeans, and web services.\* Optionally, provides transaction control support to the model layer and permits web applications to scale better\* Cooperates with the highly visual design tools in the JDeveloper IDE and enables an integrated view of the entire J2EE application project References: [http://download.oracle.com/otn\\_hosted\\_doc/jdeveloper/1012/developing\\_mvc\\_applications/adf\\_aoverviewadfadmvmc.html](http://download.oracle.com/otn_hosted_doc/jdeveloper/1012/developing_mvc_applications/adf_aoverviewadfadmvmc.html)
