ネットワーク管理者は、vManageでOMPを構成して、2つのWANエッジデバイスがあるサイトから同じプレフィックスのすべてのパスをアドバタイズします。各WANエッジデバイスは、3つのISPと2つのプライベートMPLSトランスポートに接続されています。設定する必要がある「プレフィックスごとにアドバタイズされるパスの数」の最小値はいくつですか。 **A. 0 B. 1 C. 2 D. 3** **Answer: D**

NEW QUESTION: 4 Scenario: An application that uses HTTP for connections and other protocols for different types of content has been deployed. Load balancing virtual servers have been created for each protocol and the engineer now needs to ensure that once a load balancing decision has occurred, further requests for different content are served from the

same server. How could the engineer achieve this? **A.** Create a persistency group. **B.** Add a new virtual server for each protocol that is not directly addressable. **C.** Set the Spillover method to DYNAMICCONNECTION. **D.** Set each virtual server to use Source IP Hash as the load balancing method. **Answer: A**

Explanation: Summary A Web application may use HTTP and HTTPS in the same session. This article describes the configuration necessary to ensure persistence is maintained across both HTTP and HTTPS connections. Background The NetScaler allows us to configure persistency groups to accommodate exactly such a need. A practical example of this might be a shopping cart where items are browsed over HTTP, but purchased over HTTPS. If persistency were not maintained, it's possible the shopping cart might be lost, the user logged out, or other adverse actions. By using persistency groups, the HTTP and HTTPS vServers are grouped together into one persistent entity. Procedure From the GUI: 1. Click and expand the Load Balancing node. 2. Click Persistency Groups. 3. Click Add. 4. Populate the Group Name field. 5. Choose between COOKIEINSERT, SOURCEIP or RULE from the Persistencedropdown and configure a timeout. 6. Choose a backup persistence method if desired. 7. Select the vServers to be grouped from the Available Virtual Servers list. 8. Click Add to move the vServers from the available list to the configured list. From the command line interface (CLI): Issue the following commands: 1. bind lb group <name of group> <vserver 1> 2. bind lb group <name of group> <vserver 2> 3. 4. set lb group <name of group> -persistenceType <persistence method> - persistenceBackup <backup persistence method>
