## **NEW QUESTION: 2**

注：この質問は、同じシナリオを提示する一連の質問の一部です。シリーズの各質問には、記載された目標を達成する可能性のある独自のソリューションが含まれています。一部の質問セットには複数の正しい解決策がある場合もあれば、正しい解決策がない場合もあります。

このセクションの質問に回答すると、その質問に戻ることはできません。その結果、これらの質問はレビュー画面に表示されません。複数の列に欠損値を含む数値データセットを分析しています。機能セットの次元に影響を与えることなく、適切な操作を使用して欠損値を消去する必要があります。すべての値を含めるには、完全なデータセットを分析する必要があります。

解決策：最後の観測キャリーフォワード（IOCF）メソッドを使用して、欠落したデータポイントを補完します。ソリューションは目標を達成していますか？**A.** いいえ **B.** はい **Answer: A**

**Explanation:** Instead use the Multiple Imputation by Chained Equations (MICE) method. Replace using MICE: For each missing value, this option assigns a new value, which is calculated by using a method described in the statistical literature as "Multivariate Imputation using Chained Equations" or "Multiple Imputation by Chained Equations". With a multiple imputation method, each variable with missing data is modeled conditionally using the other variables in the data before filling in the missing values. Note: Last observation carried forward (LOCF) is a method of imputing missing data in longitudinal studies. If a person drops out of a study before it ends, then his or her last observed score on the dependent variable is used for all subsequent (i.e., missing) observation points. LOCF is used to maintain the sample size and to reduce the bias caused by the attrition of participants in a study. References:

**NEW QUESTION: 4**You develop a SQL Server Integration Services (SSIS) package in a project by using the Project Deployment Model. It is regularly executed within a multi-step SQL Server Agent job. You make changes to the package that should improve performance. You need to establish if there is a trend in the durations of the next 10 successful executions of the package. You need to use the least amount of administrative effort to achieve this goal. What should you do?**A.** Enable logging to the Application Event Log in the package control flow for the OnInformation event. After 10 executions, view the Application Event Log.**B.** Enable logging to an XML file in the package control flow for the OnPostExecute event. After 10 executions, view the XML file.**C.** After 10 executions, in SQL Server Management Studio, view the Execution Performance subsection of the All Executions report for the project.**D.** After 10 executions, view the job history for the SQL Server Agent job.**Answer: C**  
Explanation: The All Executions Report displays a summary of all Integration Services executions that have been performed on the server. There can be multiple executions of the sample package. Unlike the Integration Services Dashboard report, you can configure the All Executions report to show executions that have started during a range of dates. The dates can span multiple days, months, or years. The report displays the following sections of information. \* Filter Shows the current filter applied to the report, such as the Start time range. \* Execution Information Shows the start time, end time, and duration for each package execution. You can view a list of the parameter values that were used with a package execution, such as values that were passed to a child package using the Execute Package task.
