Fortunately, NSE 5 Network Security Analyst Fortinet NSE 5 - FortiAnalyzer 7.2 Analyst **NSE5_FAZ-7.2 Study Materials Review** pdf test dumps may do help for your preparation.

NEW QUESTION: 1A. Option CB. Option AC. Option DD. Option B
Answer: C
Explanation:You can use Computer Management to track all connections to shared resources on a Windows Server 2008 R2 system. Whenever a user or computer connects to a shared resource, Windows Server 2008 R2 lists a connection in the Sessions node. File access, modification and deletion can only be tracked, if the object access auditing is enabled you can see the entries in the event log. To view connections to shared resources, type net session at a command prompt or follow these steps: In Computer Management, connect to the computer on which you created the shared resource. In the console tree, expand System Tools, expand Shared Folders, and then select Sessions. You can now view connections to shares for users and computers. To enable folder permission auditing, you can follow the below steps: Click start and run "secpol. msc" without quotes. Open the Local Policies Audit Policy Enable the Audit object access for "Success" and "Failure". Go to target files and folders, right click the folder and select properties. Go to Security Page and click Advanced. Click Auditing and Edit. Click add, type everyone in the Select User, Computer, or Group. Choose Apply onto: This folder, subfolders and files. Tick on the box "Change permissions" Click OK. After you enable security auditing on the folders, you should be able to see the folder permission changes in the server's Security event log. Task Category is File System.
