**NEW QUESTION: 2A.** Option BB. Option CC. Option ED. Option DE. Option FF. Option A

**Answer: A,D**Explanation:When To Use Interfaces An interface allows somebody to start from scratch to implement your interface or implement your interface in some other code whose original or primary purpose was quite different from your interface. To them, your interface is only incidental, something that has to be added on to their code to be able to use your package. The disadvantage is every method in the interface must be public. You might not want to expose everything.\*When To Use Abstract classes An abstract class, in contrast, provides more structure. It usually defines some default implementations and provides some tools useful for a full implementation. The catch is, code using it must use your class as the base. That may be highly inconvenient if the other programmers wanting to use your package have already developed their own class hierarchy independently. In Java, a class can inherit from only one base class.\*When to Use Both You can offer the best of both worlds, an interface and an abstract class. Implementors can ignore your abstract class if they choose. The only drawback of doing that is calling methods via their interface name is slightly slower than calling them via their abstract class name.

**NEW QUESTION:** 3A company has multiple lines of business (LOBs) that roll up to the parent company. The company has asked its solutions architect to develop a solution with the following requirements: \* Produce a single AWS invoice for all of the AWS accounts used by its LOBs \* The costs for each LOB account should be broken out on the invoice \* Provide the ability to restrict services and features in the LOB accounts, as defined by the company's governance policy \* Each LOB account should be delegated full administrator permissions, regardless of the governance policy Which combination of steps should the solutions architect take to meet these requirements? (Select TWO.) **A.** Use AWS Organizations to create a single organization in the parent account Then, invite each LOB's AWS account to pin the organization **B.** Create an SCP that allows only approved services and features, then apply the policy to the LOB accounts Enable consolidated billing in the parent account's billing console and link the LOB accounts **C.** Use AWS Organizations to create an organization in the parent account for each LOB Then invite each LOB account to the appropriate organization **D.** Implement service quotas to define the services and features that are permitted and apply the quotas to each LOB. as appropriate  
**Answer: B,D**
