**NEW QUESTION: 2** A. Option A B. Option C C. Option D D. Option B **Answer: A**

**NEW QUESTION: 3** The presence of \_\_\_\_\_ can destabilize the scale and turn it into a nonprotective scale. **A.** H<sup>2</sup>O **B.** H<sup>2</sup>S **C.** H<sup>2</sup>D **D.** O<sup>2</sup> **Answer: A**

**NEW QUESTION: 4** router name - Weaver inside global addresses - 198.18.184.105 - 198.18.184.110/29 inside local addresses - 192.168.100.17 - 192.168.100.30/28 number of inside hosts - 14 **Answer: Explanation:** The company has 14 hosts that need to access the internet simultaneously but we just have 6 public IP addresses from 198.18.184.105 to 198.18.184.110/29. Therefore we have to use NAT overload (or PAT) Double click on the Weaver router to open it Router>enable Router#configure terminal First you should change the router's name to Weaver Router(config)#hostname Weaver Create a NAT pool of global addresses to be allocated with their netmask. Weaver(config)#ip nat pool mypool 198.18.184.105 198.18.184.110 netmask 255.255.255.248 Create a standard access control list that permits the addresses that are to be translated. Weaver(config)#access-list 1 permit 192.168.100.16 0.0.0.15 Establish dynamic source translation, specifying the access list that was defined in the prior step. Weaver(config)#ip nat inside source list 1 pool mypool overload This command translates all source addresses that pass access list 1, which means a source address from 192.168.100.17 to 192.168.100.30, into an address from the pool named mypool (the pool contains addresses from 198.18.184.105 to 198.18.184.110). Overload keyword allows to map multiple IP addresses to a single registered IP address (many-to-one) by using different ports. The question said that appropriate interfaces have been configured for NAT inside and NAT outside statements. This is how to configure the NAT inside and NAT outside, just for your understanding: Weaver(config)#interface fa0/0 Weaver(config-if)#ip nat inside Weaver(config-if)#exit Weaver(config)#interface s0/0 Weaver(config-if)#ip nat outside Weaver(config-if)#end Finally, we should save all your work with the following command: Weaver#copy running-config startup-config Check your configuration by going to "Host for testing" and type: C :>ping 192.0.2.114 The ping should work well and you will be replied from 192.0.2.114
