障害が発生した場合、回復されたデータウェアハウスを指すように接続文字列を更新します。E.

毎日、復元されたデータウェアハウスへのアクセスを許可するAzure

Firewallルールを作成します。Answer: B,D,E Explanation: E: You can create a user-defined restore point and restore from the newly created restore point to a new data warehouse in a different region. Note: A data warehouse snapshot creates a restore point you can leverage to recover or copy your data warehouse to a previous state. A data warehouse restore is a new data warehouse that is created from a restore point of an existing or deleted data warehouse. On average within the same region, restore rates typically take around 20 minutes. Incorrect Answers: A: SQL Data Warehouse performs a geo-backup once per day to a paired data center. The RPO for a geo-restore is 24 hours. You can restore the geo-backup to a server in any other region where SQL Data Warehouse is supported. A geo-backup ensures you can restore data warehouse in case you cannot access the restore points in your primary region.
