**NEW QUESTION: 1**When synchronizing libraries, you modify an entity in the source and the target libraries. How does HP ALM 12 apply the Change and manage conflicts?**A.** The entity in the source library is overwritten**B.** Changes are merged in both libraries**C.** The entity in the target library is overwritten.**D.** A report is generated and changes are suspended.**Answer: C**

**NEW QUESTION: 2**Which of the following are ways to secure data at rest and in transit in AWS. Choose 3 answers from the options given below**A.** Use server side encryption for S3**B.** Use SSL/HTTPS when using the Elastic Load Balancer**C.** Use IOPS volumes when working with EBS volumes on EC2 Instances**D.** Encrypt all EBS volumes attached to EC2 Instances**Answer: A,B,D**  
**Explanation:**ExplanationThe AWS documentation mentions the following Amazon CBS encryption offers you a simple encryption solution for your EBS volumes without the need for you to build, maintain, and secure your own key management infrastructure. When you create an encrypted CBS volume and attach it to a supported instance type, the following types of data are encrypted:  
Data at rest inside the volume  
All data moving between the volume and the instance  
All snapshots created from the volume  
Data protection refers to protecting data while in-transit (as it travels to and from Amazon S3) and at rest (while it is stored on disks in Amazon S3 data centers). You can protect data in transit by using SSL or by using client-side encryption. You have the following options of protecting data at rest in Amazon S3.  
Use Server-Side encryption - You request Amazon S3 to encrypt your object before saving it on disks in its data centers and decrypt it when you download the objects.  
Use Client-Side Encryption - You can encrypt data client-side and upload the encrypted data to Amazon S3. In this case, you manage the encryption process, the encryption keys, and related tools.  
You can create a load balancer that uses the SSL/TLS protocol for encrypted connections (also known as SSL offload). This feature enables traffic encryption between your load balancer and the clients that initiate HTTPS sessions, and for connections between your load balancer and your EC2 instances. For
