NEW QUESTION: 2You notice some performance degradation for a high-load SQL statement in your database. After investigations, you run the SQL Tuning Advisor, which recommends a SQL Profile. You accept the profile recommendation resulting in a new, tuned execution plan for the statement. Your database uses SQL plan management and a SQL plan baseline exists for this SQL statement. Which statement is true? **A.** The database adds the tuned plan to the SQL plan baseline as a nonfixed plan. **B.** The optimizer uses the new tuned plan only when a reproducible fixed plan is present. **C.** The created SQL profile will continuously adapt to all changes made to the database, the object, and to the system statistics over an extended length of time. **D.** The database adds the tuned plan to the SQL plan baseline as a fixed plan. **Answer: A**
Explanation:
Note: *When the SQL Tuning Advisor recommends that a SQL Profile be used, you should accept the SQL Profile that is recommended. In cases where the SQL Tuning Advisor recommends that an index and a SQL Profile be used, both should be used. You can use the DBMS_SQLTUNE.ACCEPT_SQL_PROFILE procedure to accept a SQL Profile recommended by the SQL Tuning Advisor. This creates and stores a SQL Profile in the database. *When tuning SQL statements with the SQL Tuning Advisor, if the advisor finds a tuned plan and verifies its performance to be better than a plan chosen from the corresponding SQL plan baseline, it makes a recommendation to accept a SQL profile. When the SQL profile is accepted, the tuned plan is added to the corresponding SQL plan baseline. *If SQL plan management is used and there is already an existing plan baseline for the SQL statement, a new plan baseline will be added when a SQL profile is created. *SQL plan management is a preventative mechanism that records and evaluates the execution plans of SQL statements over time, and builds SQL plan baselines composed of a set of existing plans known to be efficient. The SQL plan baselines are then used to preserve performance of corresponding SQL statements, regardless of changes occurring in the system. *SQL plan baseline is fixed if it contains at least one enabled plan whose FIXED attribute is set to YES. *ACCEPT_SQL_PROFILE Procedure and Function This procedure creates a SQL Profile recommended by the SQL Tuning Advisor. The SQL text is normalized for matching purposes though it is stored in the data dictionary in de-normalized

form for readability.
