NEW QUESTION: 3Which statement correctly describes the function of a private VLAN?
A. A private VLAN enables the creation of multiple VLANs using one broadcast domain.B. A private VLAN combines the Layer 2 broadcast domains of many VLANs into one major broadcast domain.C. A private VLAN partitions the Layer 3 broadcast domain of a VLAN into subdomains.D. A private VLAN partitions the Layer 2 broadcast domain of a VLAN into subdomains.
Answer: D
Explanation:A private VLAN partitions the Layer 2 broadcast domain of a VLAN into subdomains, allowing you to isolate the ports on the switch from each other. A subdomain consists of a primary VLAN and one or more secondary VLANs. All VLANs in a private VLAN domain share the same primary VLAN. The secondary VLAN ID differentiates one subdomain from another. The secondary VLANs may either be isolated VLANs or community VLANs. A host on an isolated VLAN can only communicate with the associated promiscuous port in its primary VLAN. Hosts on community VLANs can communicate among themselves and with their associated promiscuous port but not with ports in other community VLANs.Reference:
