**NEW QUESTION: 1**You have an on-premises network that you plan to connect to Azure by using a site-to-site VPN. In Azure, you have an Azure virtual network named VNet1 that uses an address space of 10.0.0.0/16. VNet1 contains a subnet named Subnet1 that uses an address space of 10.0.0.0/24. You need to create a site-to-site VPN to Azure. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **NOTE:** More than one order of answer choices is correct. You will receive credit for any of the correct orders you select. **Answer:** Explanation: Explanation: Note: More than one order of answer choices is correct. Creating a local gateway (a logical object that represents the on-premise router) can be done at step 1, step 2 or step 3. The other three steps must be done in order: create gateway subnet then create VPN gateway then create the VPN connection. The VPN connection is a connection between the VPN gateway and the Local gateway.

**NEW QUESTION: 2**DRAG DROP You need to implement security according to the business requirements. You have the following code: Which code segments should you include in Target 1, Target 2, Target 3 and Target 4 to modify RunLogController? To answer, drag the appropriate code segment to the correct targets. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. **Answer:** Explanation:

**NEW QUESTION: 3**SIMULATION Click to expand each objective. To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar. When you are finished performing all the tasks, click the 'Next' button. Note that you cannot return to the lab once you click the 'Next' button. Scoring occurs in the background while you complete the rest of the exam. **Overview** The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully

perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. To start the lab you may start the lab by clicking the Next button. You plan to host several secured websites on Web01. You need to allow HTTPS over TCP port 443 to Web01 and to prevent HTTP over TCP port 80 to Web01. What should you do from the Azure portal?

**Answer:** Explanation: See explanation below. Explanation You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources. Step A: Create a network security group A1. Search for and select the resource group for the VM, choose Add, then search for and select Network security group. A2. Select Create. The Create network security group window opens. A3. Create a network security group Enter a name for your network security group. Select or create a resource group, then select a location. A4. Select Create to create the network security group. Step B: Create an inbound security rule to allow HTTPS over TCP port 443 B1. Select your new network security group. B2. Select Inbound security rules, then select Add. B3. Add inbound rule B4. Select Advanced. From the drop-down menu, select HTTPS. You can also verify by clicking Custom and selecting TCP port, and 443. B5. Select Add to create the rule. Repeat step B2-B5 to deny TCP port 80 B6. Select Inbound security rules, then select Add. B7. Add inbound rule B8. Select Advanced. Clicking Custom and selecting TCP port, and 80. B9. Select Deny. Step C: Associate your network security group with a subnet Your final step is to associate your network security group with a subnet or a specific network interface. C1. In the Search resources, services, and docs box at the top of the portal, begin typing Web01. When the Web01 VM appears in the search results, select it. C2. Under SETTINGS, select Networking. Select Configure the application security groups, select the Security Group you created in Step A, and then select Save, as shown in the following picture: References:
