NEW QUESTION: 1 Which of the following are requirements for MyISAM binary portability?
A. Both machines must use two's-complement integer arithmetic.
B. Database and table names must use lowercase format.
C. Both machines must use IEEE floating-point format or contain no floating-point columns.
D. Both machines must use the same operating system.
Answer: A,B,C
Explanation: 32.3.4. Conditions for Binary Portability
MyISAM tables and InnoDB tablespaces are binary portable from one host to another if two conditions are met: Both machines must use two's-complement integer arithmetic. Both machines must use IEEE floating-point format, or else the tables must contain no floating-point columns (FLOAT or DOUBLE). In practice, those two conditions pose little restriction. Two's-complement integer arithmetic and IEEE floating-point format are the norm on modern hardware. A third condition for InnoDB binary portability is that you should use lowercase names for databases and tables. This is because InnoDB stores these names internally (in its data dictionary) in lowercase on Windows. Using lowercase names allows binary portability between Windows and Unix. To force the use of lowercase names, you can put the following lines in an option file: [mysqld]
lower_case_table_names=1
