If you are IT workers, AZ-305: Designing Microsoft Azure Infrastructure Solutions torrent may be your new beginning, However, one day when I was sick of hearing Actual Tests' praises, I checked out the details on Photoexperienceacademy.com.

NEW QUESTION: 1

ポーリングデータストレージアカウントをプロビジョニングする必要があります。
ストレージアカウントをどのように構成する必要がありますか？答えるには、適切な設定値を正しい設定にドラッグします。各構成値は、1回、複数回、またはまったく使用されない場合があります。コンテンツを表示するには、ペイン間で分割バーをドラッグするか、スクロールする必要があります。注：それぞれの正しい選択には1ポイントの価値があります。**Answer:**
Explanation:ExplanationAccount type: StorageV2You must create new storage accounts as type StorageV2 (general-purpose V2) to take advantage of Data Lake Storage Gen2 features.
Scenario: Polling data is stored in one of the two locations:* An on-premises Microsoft SQL Server 2019 database named PollingData* Azure Data Lake Gen 2Data in Data Lake is queried by using PolyBaseReplication type: RA-GRSScenario: All services and processes must be resilient to a regional Azure outage.Geo-redundant storage (GRS) is designed to provide at least 99.99999999999999% (16 9's) durability of objects over a given year by replicating your data to a secondary region that is hundreds of miles away from the primary region. If your storage account has GRS enabled, then your data is durable even in the case of a complete regional outage or a disaster in which the primary region isn't recoverable.If you opt for GRS, you have two related options to choose from:* GRS replicates your data to another data center in a secondary region, but that data is available to be read only if Microsoft initiates a failover from the primary to secondary region.* Read-access geo-redundant storage (RA-GRS) is based on GRS. RA-GRS replicates your data to another data center in a secondary region, and also provides you with the option to read from the secondary region. With RA-GRS, you can read from the secondary region regardless of whether Microsoft initiates a failover from the primary to secondary region.References:
