NEW QUESTION: 4ネットワーク環境を構成および保護しています。ネットワークトラフィックを分析するように構成されたVM1という名前のAzure仮想マシンを展開します。すべてのネットワークトラフィックがVM1経由でルーティングされるようにする必要があります。何を設定する必要がありますか？**A.** a system route**B.** a network security group (NSG)**C.** a user-defined route**Answer: C**Explanation: Although the use of system routes facilitates traffic automatically for your deployment, there are cases in which you want to control the routing of packets through a virtual appliance. You can do so by creating user defined routes that specify the next hop for packets flowing to a specific subnet to go to your virtual appliance instead, and enabling IP forwarding for the VM running as the virtual appliance. Note: User Defined Routes For most environments you will only need the system routes already defined by Azure. However, you may need to create a route table and add one or more routes in specific cases, such as: * Force tunneling to the Internet via your on-premises network. * Use of virtual appliances in your Azure environment. * In the scenarios above, you will have to create a route table and add user defined routes to it.
