**NEW QUESTION: 3** DRAG DROP Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012. Server1 resides in the perimeter network and has the Remote Access server role installed. Some users have laptop computers that run Windows 7 and are joined to the domain. Some users work from home by using their home computers. The home computers run either Windows XP, Windows Vista/ Windows 7, or Windows 8. You need to configure the computers for remote

access. Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order. Select and Place: **Answer:** Explanation: Explanation/Reference: Explanation: \* Installing CMAK CMAK is an optional component that is not installed by default. You must install CMAK to create connection profiles that your users can install to access remote networks. \* The Connection Manager Administration Kit (CMAK) is a tool that you can use to customize the remote connection experience for users on your network by creating predefined connections to remote servers and networks. To create and customize a connection for your users, you use the CMAK wizard. \* Distributing your completed connection profile Running the CMAK wizard produces a connection profile that is stored in an executable file. Running that file on a client computer equips that computer with everything needed to establish the network connection that you designed.
