NEW QUESTION: 1 Segregation of duties would be compromised if:
A. application programmers accessed test data.
B. operations staff modified batch schedules.
C. application programmers moved programs into production.
D. database administrators (DBAs) modified the structure of user tables.
Answer: A

NEW QUESTION: 2 You need to recommend a solution for the data store of the historical transaction query system. What should you include in the recommendation? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation

NEW QUESTION: 3 HOTSPOT Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. You have a database named Sales that contains the following database tables: Customer, Order, and Products. The Products table and the Order table are shown in the following diagram. The customer table includes a column that stores the data for the last order that the customer placed. You plan to create a table named Leads. The Leads table is expected to contain approximately 20,000 records. Storage requirements for the Leads table must be minimized. You need to implement a stored procedure that deletes a discontinued product from the Products table. You identify the following requirements: If an open order includes a discontinued product, the records for the product must not be deleted. The stored procedure must return a custom error message if a product record cannot be

deleted. The message must identify the OrderID for the open order. What should you do? To answer, select the appropriate Transact-SQL segments in the answer area. Hot Area: **Answer:** Explanation: Explanation/Reference: Using TRY...CATCH in Transact-SQL Errors in Transact-SQL code can be processed by using a TRY...CATCH construct. TRY...CATCH can use the following error function to capture error information: ERROR_MESSAGE() returns the complete text of the error message. The text includes the values supplied for any substitutable parameters such as lengths, object names, or times.
