Trust us; our study materials are absolutely right for you, Only then can you easily deal with the NSE7_SDW-7.2 exam, For this, you need to have an overview of the exam, blueprint **Free NSE7_SDW-7.2 Updates** of the exam, and also go through the information given on the official website.

So they have restless state of mind, We have been providing updated and real NSE7_SDW-7.2 mock test preparation material, Pay more attention to privacy protection.

NSE7_SDW-7.2 valid training material is updated in highly outclass manner on regular basis and the update for NSE7_SDW-7.2 valid exam cram are released periodically.

NEW QUESTION: 1 Welcher der folgenden Ansätze ist der effektivste, um Sicherheit in die Anwendungsentwicklung zu integrieren? **A.** Sicherheitsanforderungen definieren **B.** Parallele Entwicklung von Sicherheitsmodellen **C.** Durchführen von Schwachstellen-Scans **D.** Einbeziehung der Sicherheit in die Abmeldung zum Testen der Benutzerakzeptanz **Answer: A**

NEW QUESTION: 2 In Recovery Manager (RMAN), you are taking image copies of the data files of your production database and rolling them forward at regular intervals. You attempt to restart your database. After a regular maintenance task, you realize that one of the data files that belongs to the USERS tablespace is damaged and you need to recover the data file by using the image copy. Because a media failure caused the data file to be damaged, you want to place the data file in a different location while restoring the file. Which option must you consider for this task? **A.** using only the RMAN SWITCH command to set the new location for the data file **B.** placing the database in the MOUNT state for the restore and recovery operations. **C.** using an RMAN RUN block with the SET NEWNAME and then the SWITCH command. **D.** configuring two channels: one for the restore operation and the other for the recovery operation **Answer: C**
Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 3 **A.** Option **A**. **B.** Option **D**. **C.** Option **B**. **D.** Option **C** **Answer: C**

NEW QUESTION: 4 You manage an Azure web app in standard service tier at the following address: contoso.azurewebsites.net Your company has a new domain for the site named www.contoso.com that must be accessible by secure socket layer (SSL) encryption. You need to add a custom domain to the Azure web app and assign an SSL certificate. Which three actions should you perform? Each correct answer presents part of the solution. **A.** Create a CNAME record from www.contoso.com to contoso.azurewebsites.net. **B.** Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected. **C.** Create a new file that will redirect the site to the new URL and upload it to the Azure Web site. **D.** Add www.contoso.com to the list of domain names as a custom domain. **E.** Add SSL binding for the www.contoso.com domain with the server Name indication (SNI) SSL option selected. **Answer: A, B, C**
Explanation: Step 1: When adding a CNAME record, you must set the Host Name field to the sub-domain you wish to use. For example, www. You must set the Address field to the .azurewebsites.net domain name of your Azure Website. For example, contoso.azurewebsites.net.* Step 2: Modify the service definition and configuration files Your application must be configured to use the certificate, and an HTTPS endpoint must be added. As a result, the service definition and

service configuration files need to be updated.* Step 3:IP based SSL associates a certificate with a domain name by mapping the dedicated public IP address of the server to the domain name. This requires each domain name (contoso.com, fabricam.com, etc.) associated with your service to have a dedicated IP address. This is the traditional method of associating SSL certificates with a web server.References:NEW QUESTIONS
